## Adverse Effects: Alternatives Consideration

### Alternatives Consideration

Please provide documentation of consideration of a variety of alternatives that avoid or minimize effects to the identified historic property. The analysis should clearly state the problems to be solved/needs of the project and outline with supporting data the alternatives considered. The analysis should provide sufficient data and supporting documentation to demonstrate why a particular alternative is or is not viable. The data should not be manipulated to support a predetermined outcome; rather, the selection of the preferred alternative should be supported by the data itself.

Specific questions to be answered include:

1. Would this property be a good candidate for elevation raising?

2. Would relocation on the parcel or another parcel out of the flood zone be feasible?
