UNIT 1: INTRODUCTION AND COURSE OVERVIEW
LEARNING OBJECTIVE

- **Review** the learning objective for this unit:
  - Identify the objectives and expectations of the course.

ADMINISTRATIVE

- **Review** class rules and safety items:
  - Emergency exits
  - Restrooms
  - Turn pagers and cell phones to vibrate
  - Timesheets

COURSE GOAL

The goal of this course is to enable participants to build a disaster-resilient community by carrying out mitigation responsibilities in accordance with applicable regulations and standards.
COURSE OBJECTIVES

- Analyze reasons for differences between optimal and actual mitigation roles of the emergency manager.
- Determine strategies to build support for mitigation in a community.
- Analyze hazard risks for a given scenario.
- Develop a mitigation plan implementation strategy for a given scenario.
- Develop a proposal for obtaining financial aid and technical resources needed to carry out a mitigation strategy for a given scenario.
- Evaluate the effectiveness of a community’s mitigation planning efforts.
- Recommend actions to optimize the mitigation role of the emergency manager.

INTRODUCTIONS

- Introduce yourself by sharing your:
  - Name
  - Position/organization
  - Mitigation experience
  - Course expectations
UNIT 2: THE EMERGENCY MANAGER’S ROLE IN MITIGATION
This page intentionally left blank.
UNIT OVERVIEW

As an emergency manager, you play a unique role in helping to mitigate the community’s hazards.

Remember, mitigation is defined as sustained actions taken to reduce or eliminate long-term risk to people and property from hazards and their effects. Mitigation measures focus on actions that produce long-term benefits to a community.

LEARNING OBJECTIVES

- Review the learning objectives for this unit:
  - Compare the actual mitigation role of the emergency manager to the optimal mitigation role.
  - Create a list of potential obstacles to successful mitigation.

EMERGENCY MANAGEMENT MISSION AREAS

Mission areas are groups of core capabilities, including Prevention, Protection, Mitigation, Response, and Recovery. Each mission area is comprised of the capabilities required for achieving the function at any time (before, during, or after an incident) and across all threats and hazards.

- **Prevention:** The capabilities necessary to avoid, prevent, or stop a threatened or actual act of terrorism. As defined by PPD-8, the term “prevention” refers to preventing imminent threats.
- **Protection:** The capabilities necessary to secure the homeland against acts of terrorism and manmade or natural disasters.
- **Response:** The capabilities necessary to save lives, protect property and the environment, and meet basic human needs after an incident has occurred.
**Recovery:** The capabilities necessary to assist communities affected by an incident to recover effectively

**Mitigation:** The capabilities necessary to reduce loss of life and property by lessening the impact of disasters

Refer to the National Preparedness Goal – [Mission Areas](https://www.fema.gov/mission-areas) to learn more. (This link can also be accessed at the following URL: https://www.fema.gov/mission-areas.)

**MITIGATION PLANNING PROCESS**

In this course, we will discuss the mitigation planning process in four phases. Each phase includes tasks that are outlined in the Local Mitigation Planning Guide.

- **Phase 1:** Organize Resources
  - Determine the planning area and resources (Task 1)
  - Build the planning team (Task 2)
  - Create an outreach strategy (Task 3)

- **Phase 2:** Assess Risks
  - Review community capabilities (Task 4)
  - Conduct a risk assessment (Task 5)

- **Phase 3:** Develop the Mitigation Plan
  - Develop a mitigation strategy (Task 6)

- **Phase 4:** Implement the Mitigation Strategy and Monitor Progress.
  - Keep the plan current (Task 7)
  - Review and adopt the plan (Task 8)
ACTIVITY 1: YOUR ROLE IN MITIGATION (PART 1)

In this section, we will develop a class profile of mitigation tasks actually performed by emergency managers and others responsible for the mitigation function.
YOUR ROLE IN MITIGATION

Think about the particular role you play in mitigation in your community, considering your current and past involvement in mitigation activities.

- In the first column of the worksheet, list all of the ways you encourage and participate in mitigation activities within your jurisdiction.
- You have 10 minutes to complete this part of the activity.
- During the class discussion, use the middle column to list additional mitigation activities.
- During the next portion of the activity (when instructed), complete the last column.

<table>
<thead>
<tr>
<th>Ways you encourage and participate in mitigation activities within your jurisdiction</th>
<th>Ways others encourage and participate in mitigation activities within their jurisdictions</th>
<th>Mitigation activities you would like to accomplish in your community</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
EMERGENCY MANAGER’S ROLE

Optimally, an emergency manager has eight primary responsibilities:

- Identify community hazards and hazard risk.
- Identify existing mitigation measures.
- Propose additional mitigation measures.
- Coordinate with other community goals.
- Identify incentives and resources.
- Participate in a mitigation planning team.
- Support the creation/maintenance of a mitigation plan.
- Increase public awareness.

Keep in mind that an up-to-date mitigation plan is a must to be eligible for federal mitigation hazard funds. If the community does not have a hazard mitigation plan in place, no federal hazard mitigation money will be awarded.

PARTICIPATE IN A PLANNING TEAM

Building an effective mitigation program requires the support and commitment of the community leadership. This commitment is created by involving the community in the planning process.

Crucial to the success of any mitigation program is the formation of a mitigation planning team. This team consists of individuals with a variety of skills and expertise needed to accomplish mitigation. The emergency manager is a key member of that team, and your role will be to help assemble the rest of the team and coach other members as needed.

IDENTIFY HAZARDS AND RISKS

Risk analysis is the cornerstone of mitigation. It is the emergency manager’s responsibility to be aware of all possible natural and technological hazards to the community, and to analyze the relative risks presented by those hazards.
Risk assessment will be reviewed in Unit 4 of this course, as will the role of the emergency manager in ongoing monitoring of hazards and hazard risks.

**IDENTIFY EXISTING MITIGATION MEASURES**

Many communities are already involved in mitigating local hazards.

To coordinate mitigation activities, emergency managers need to be aware of all ongoing community programs and activities that affect or relate to mitigation.

**PROPOSE ADDITIONAL MITIGATION MEASURES**

Emergency managers must identify or facilitate the identification of potential new mitigation measures, often referred to as mitigation opportunities.

All mitigation measures must address a specific community concern, from the risk analysis, such as repetitive flooding, high winds, wildfires, or earthquakes. When identifying mitigation opportunities to incorporate into the mitigation strategy, you must consider whether the measures promote other community objectives and values.

You will learn more about identifying mitigation opportunities in Unit 4.

**COORDINATE WITH COMMUNITY GOALS**

Working to achieve mitigation through other community goals is essential to the effectiveness of the mitigation program. This coordination promotes:

- Improved access to technical assistance and financial resources.
- Better solutions to multiple problems.
- Broader support for implementation.
- Reduced chance for duplicating efforts.
IDENTIFY INCENTIVES AND RESOURCES

A successful mitigation program has to have stable sources of funding, and it has to be economically attractive to individuals and businesses in the community.

It is the responsibility of the emergency manager to identify potential sources of funding.

- These sources may be local, private, State, Federal, or a combination of different sources.
- Specific programs will be discussed in Unit Six of this course.

Keep in mind that your mitigation strategy is not determined by the source of mitigation funding. The specific mitigation measures in your strategy should be identified based on the needs of the community.

SUPPORT THE CREATION/MAINTENANCE OF A MITIGATION PLAN

Ideally, the community’s mitigation plan is developed prior to the occurrence of a disaster. Once a mitigation plan is developed, it should be continually updated and maintained.

In Unit 7 of this course, you will have the opportunity to evaluate or begin your own community mitigation plan.

INCREASE PUBLIC AWARENESS

One of the most important components of a mitigation program is public awareness.

To have a successful mitigation program, community members must understand the impact of natural or technological disasters and how that risk to the community can be reduced with a mitigation program. The emergency manager plays a key role in bringing this information to the public.
Developing and enhancing public involvement and awareness is an integral part of mitigation planning and will be discussed again in Unit 3.

**ACTUAL VS. IDEAL ROLES**

The mitigation tasks we discussed are intended to give you some ideas for defining your own role in mitigating the hazards in your own community.

*How do these “ideal” mitigation tasks compare to the mitigation activities most emergency managers are accomplishing?*

**ACTIVITY 1: YOUR ROLE IN MITIGATION (PART 2)**

**OBSTACLES TO SUCCESSFUL MITIGATION**

*What problems do you face in trying to promote mitigation measures within your jurisdiction?*
UNIT SUMMARY

- Briefly review the topics discussed in this unit:
  - Optimal vs. actual role of the emergency manager
  - Potential obstacles to mitigation
  - Solutions to potential obstacles
This page intentionally left blank.
UNIT 3: BUILDING SUPPORT FOR DISASTER RESILIENCE
This page intentionally left blank.
UNIT OVERVIEW

In this unit, we will discuss how mitigation fits in with overall community objectives and how emergency managers should begin the hazard mitigation process.

From the start, communities should focus on organizing the resources needed for successful mitigation.

LEARNING OBJECTIVES

- Review the learning objectives for this unit:
  - Explain the characteristics of a disaster-resilient community.
  - Outline the long-term benefits of public participation in mitigation.
  - Describe the effect of stakeholder interests on mitigation efforts.
  - List organizations, groups, and initiatives that can provide support for mitigation.
  - Identify potential members of a community’s mitigation planning team.

WHERE ARE WE IN THE PROCESS?

The first phase of the disaster resilience process, organizing resources, includes:

- Determining the planning area and resources (Task 1)
- Building the planning team (Task 2)
- Creating an outreach strategy (Task 3)

The tasks associated with each phase in this process are referenced in the Local Mitigation Planning Handbook.
RESILIENCE

Resilience is the ability to adapt to changing conditions and prepare for, withstand, and rapidly recover from disruption.

DISASTER-RESILIENT COMMUNITY CHARACTERISTICS

The term “disaster-resilient community” describes a long-range, community-based approach to mitigation. A disaster-resilient community is one in which significant steps and measures have been taken to reduce the community’s risk to potential hazard events.

Some characteristics of a disaster-resilient community include:

- Sustainability
- Shared vision
- Strong partnerships
- Political commitment
- Long-term perspective
- Community involvement
- Commitment to lessons learned
- Significant risk reduction measures

How would the mitigation efforts of a disaster-resilient community minimize the impact of a disaster?
CASE STUDY EXAMPLE

Details of this case study can be found in Loss Avoidance Study: Sonoma County, California Elevated Structures. (This link can also be accessed at the following URL: https://www.fema.gov/media-library/assets/documents/16559.)

BENEFITS OF MITIGATION PLANNING

What are the benefits of pre-disaster hazard planning?

PRE-DISASTER HAZARD PLANNING

Pre-disaster hazard planning is the key element in building an effective mitigation program. Pre-disaster emphasizes actions to be taken before a disaster occurs to reduce or prevent future damages.

This type of planning can:
- Meet the community’s needs
- Achieve multiple objectives
- Increase funding eligibility
- Guide post-disaster recovery
- Promote public participation

How can pre-disaster planning meet the community’s needs?

What does “multi-objective” planning mean?

When is mitigation planning an eligibility requirement for funding?
In what ways does the planning process guide post-disaster recovery?

What are the long-term benefits of public participation in the mitigation planning process?

GAINING PUBLIC SUPPORT

What are some examples of community groups that would be considered mitigation stakeholders?

What kinds of interests or concerns would you expect from each group?

How might those interests affect the mitigation efforts?

ACTIVITY 1: COMPONENTS OF A DISASTER-RESILIENT COMMUNITY
COMPONENTS FOR A DISASTER-RESILIENT COMMUNITY

- First, work individually to develop a list of the components that must be in place for a community to achieve the characteristics of disaster resilience.
- When directed by your instructor, discuss your list with your table group and work together to create a group list.
- Select a spokesperson and be prepared to share the group list with the rest of the class.

<table>
<thead>
<tr>

Activity 2: Action Item List

Allotted Time: 5 minutes

Visual 3.13

Appendix B

Activity 2: Action Item List

Visual 3.14

Phase 1: Organizing Resources

- Task 1: Determine the Planning Area & Resources
- Establish the planning area, keeping existing partnerships and planning efforts in mind

Visual 3.15

Phase 1: Organizing Resources

- Task 2: Build the Planning Team
- Create the planning team
- Obtain official recognition for the planning team
- Organize the planning team

ACTIVITY 2: ACTION ITEM LIST

Action Item List can be found in the Student Manual Appendix B.

PHASE 1: ORGANIZING RESOURCES

Task 1: Determining the planning area & resources

The first task of organizing resources is to determine the planning area and resources.

The planning area refers to the geographic area covered by the plan, usually following the local government jurisdictional boundaries.

Consider possible options for the planning area based on existing planning projects, relationships, and partnerships. Also, determine if other planning efforts could be aligned or integrated with the mitigation plan to save time and money and create better outcomes for your community.

Task 2: Build the planning team

Once you have determined the planning area and resources, it is time to identify a group of dedicated and interested individuals to be on your planning team.

The planning team should be built on existing organizations or boards whenever possible and can welcome anyone who is available to participate regularly in the meetings. Selecting members who are a good fit will become critical to the eventual success of your community’s mitigation planning process.
- Create the planning team
  - Identify those:
    - Who are the representatives of those most likely to be affected.
    - Who might be responsible for what is intended.
    - Who is likely to mobilize in support of the mitigation planning process.
    - Who can make the planning process more effective through their participation.
    - Who are the “voiceless” for whom special efforts may have to be made.
    - Who can contribute financial or technical resources.
  - If you are developing a multi-jurisdictional plan, creating a planning team structure that allows for coordination and accountability among and within the jurisdictions is important. This may include having at least one representative for each jurisdiction or including a core group of individuals from each jurisdiction participating on the planning team.

**ACTIVITY 3: POTENTIAL MEMBERS OF A PLANNING TEAM**

This worksheet can also be found in FEMA’s [Getting Started: Building Support for Mitigation Planning](https://www.fema.gov/media-library-data/20130726-1521-20490-3966/howto1.pdf). (This link can also be accessed at the following URL: https://www.fema.gov/media-library-data/20130726-1521-20490-3966/howto1.pdf.)
BUILD THE PLANNING TEAM

Working independently, check the boxes beside any individuals or organizations your community or state that you believe should be included on your planning team so you can follow up with them. Add “follow up with possible planning team members” to your Action Item List.

<table>

</table>
The planning team’s efforts will be more successful if your team is designated with the official authority to develop a mitigation plan and if the team is organized.

- **Obtain official recognition for the planning team**
  - Your planning team should consider obtaining official recognition in the form of a council resolution, a proclamation, a Memorandum of Agreement (MOA), or a Memorandum of Understanding (MOU). This recognition can go a long way toward demonstrating community or state support for mitigation action, and it greatly increases the plan’s chances of being formally adopted.

- **Organize the team**
  - **Confirm plan purpose**: Have the planning team agree on the overall purpose of the planning process and the outcome of the plan. (i.e., mission statement)
  - **Review the current mitigation plan**: Review the previously-approved plan, if available.
  - **Refine plan scope and schedule**: Have the planning team agree upon the overall scope of work and schedule for developing or updating the mitigation plan and review the requirements of the plan for FEMA approval. A sample schedule can be found in Local Mitigation Planning Handbook – Appendix A, Worksheet 2.2. (This link can also be accessed at the following URL: https://www.fema.gov/media-library-data/20130726-1910-25045-9160/fema_local_mitigation_handbook.pdf.)
  - **Establish responsibilities**: Establish roles and responsibilities, as well as time each person need to dedicate to the project.
  - **Develop an outreach strategy**: Develop an outreach strategy that identifies the stakeholder groups that are important to involve in the process and how to engage them. The planning
team also develops ideas for how to involve the general public in the planning process.

Task 3: Create an outreach strategy

Involving stakeholders who are not part of the core team in all stages of the process will introduce the planning team to different points of view about the needs of the community. It will also provide opportunities to educate the public about hazard mitigation, the planning process, any findings, and could be used to generate support for the mitigation plan.

- Identify stakeholders and public
  - **Stakeholders**: A stakeholder is any person, group, or institution that can affect or be affected by a course of action. Stakeholders that must be included in the planning process may include:
    - Neighboring communities
    - Local and regional agencies involved in hazard mitigation activities
    - Agencies that have the authority to regulate development
    - Businesses, academia, and other private and nonprofit interests
  - **Public**: A good public outreach effort not only informs, but educates the public and motivates them to take action.

- Organize public participation activities
  - Brainstorm outreach activities
  - Determine public outreach objectives and schedule
  - Identify appropriate outreach methods
  - Develop clear and consistent messages that align with community values
  - Evaluate and incorporate feedback from outreach activities
- Provide an opportunity for public review of the final draft plan

UNIT SUMMARY

- Briefly review the topics discussed in this unit:
  - Characteristics of a disaster-resilient community
  - Benefits of public participation in mitigation
  - Effect of stakeholders interest on mitigation
  - Resources for mitigation support
  - Potential members of the planning team
This page intentionally left blank.
UNIT 4: IDENTIFYING OPPORTUNITIES FOR MITIGATION
This page intentionally left blank.
UNIT OVERVIEW

In the pursuit of disaster-resilient communities, emergency managers and other community leaders must be constantly vigilant to recognize needs and opportunities for mitigation. This unit will focus on the pursuit of those opportunities.

LEARNING OBJECTIVES

- Review the learning objectives for this unit:
  - Identify the primary types of capabilities for reducing long-term vulnerability.
  - Describe the steps in the risk assessment process.
  - Develop hazard profile and description.
  - Identify your community assets.
  - Estimate losses due to a scenario-based hazard event.
  - Describe the usefulness of Hazus.

WHERE ARE WE IN THE PROCESS?

After organizing resources for mitigation, the next phase is risk assessment. Before attempting to solve the problem, it is necessary to define and quantify it. Assessing risks involves:

- Reviewing community capabilities (Task 4)
- Conducting a risk assessment (Task 5)

The tasks associated with each phase in this process are referenced in the Local Mitigation Planning Handbook.
PHASE 2: ASSESS RISKS

Task 4: Review community capabilities

The previous three tasks under the first phase (Organize Resources) focused on the process of mitigation planning. Beginning with Task 4, the remaining tasks describe what is accomplished during the planning process.

The purpose of a capability assessment is to:

- Identify capabilities that currently reduce disaster losses or could be used to reduce losses in the future.
- Identify capabilities that inadvertently increase risks in the community.

One way to identify these capabilities is to distribute a capabilities worksheet for each planning team member’s community or agency to complete. A Capability Assessment Worksheet can be found in Appendix C.

The primary types of capabilities for reducing long-term vulnerability are:

- **Planning and regulatory:** These capabilities are based on the implementation of ordinances, policies, local laws and State statutes, and plans and programs that relate to guiding and managing growth and development. Examples include:
  - Comprehensive land use plans
  - Capital improvement programs
  - Transportation plans
  - Small area development plans
  - Disaster recovery and reconstruction plans
- Emergency preparedness and response plans

- **Administrative and technical**: This refers to the community’s staff and their skills and tools that can be used to implement specific mitigation actions. Examples include:
  - Engineers
  - Planners
  - Emergency managers
  - Geographic Information Systems (GIS) analysts
  - Grant writers

- **Financial**: These are the resources that a jurisdiction has access to or is eligible to use to fund mitigation actions.

- **Education and outreach**: This type of capability refers to education and outreach programs and methods already in place that could be used to implement mitigation activities and communicate hazard-related information. Examples include:
  - Fire safety programs delivered at local schools
  - Activities conducted as part of hazard awareness campaigns

Documentation of community capabilities provides the factual evidence for how the jurisdictions developed the plan. It can include narrative descriptions, tables, lists, citations, and footnotes.

**Task 5: Conduct a risk assessment**

Documentation of community capabilities provides the factual evidence for how the jurisdictions developed the plan. It can include narrative descriptions, tables, lists, citations, and footnotes.
RISK ASSESSMENT

What information does a risk assessment provide?

RISK ASSESSMENT – STEP 1

There are four steps in risk assessment. The first step is to describe hazards.

TYPES OF HAZARDS TO INCLUDE

What types of hazards should be included in a risk assessment?

DESCRIBE HAZARDS

When you have identified the potential hazards, you need to describe them. Describing hazards may involve:

- **Hazard descriptions**: These include description of location, extent, previous occurrences, and probability of future events. You may want to answer questions, such as:
  - How often is it likely to occur?
  - How bad can it get?
- Where is it likely to strike?
- How long is it likely to last?
- When is it more likely to occur?
- How much warning time is there?

- **Maps:** Figures and maps are necessary to support descriptions of location, extent, previous occurrences, and/or probability of future events for various hazards. A community most likely has maps (i.e. city or county map, floodplain map, zoning map, etc.) that can be used for this purpose.

- **Climate change:** The planning team may decide to include a discussion of the impacts of climate change in the risk assessment. This is not required by Federal mitigation planning regulation, but can provide a better understanding of how risk may change in the future, especially if it may change the characteristics of the hazards that currently affect the planning area.

- **Technological hazards and human-caused threats:** This is also not required by Federal mitigation planning regulation, but may be included in the plan. Technological hazards result from accidents or the failure of systems and structures, such as hazardous materials spills or airplane accidents. Human-caused incidents, also known as threats, result from intentional actions of an adversary, such as a chemical or cyber attack.

**ACTIVITY 1: IDENTIFYING HAZARDS IN YOUR COMMUNITY**

This worksheet can also be found in FEMA’s [Getting Started: Building Support for Mitigation Planning](https://www.fema.gov/media-library-data/20130726-1521-20490-3966/howto1.pdf). (This link can also be accessed at the following URL: https://www.fema.gov/media-library-data/20130726-1521-20490-3966/howto1.pdf.)
IDENTIFYING HAZARDS IN YOUR COMMUNITY

Mark the hazards your community faces. Complete each column separately when directed by your instructor.

**Risk Assessment – Step 2**

After identifying and describing hazards, the second step of the risk assessment is to identify community assets.

**Identify Community Assets**

*What are your community’s assets?*

*What are the assets that would be most affected by the hazard?*

*Where can you find information about the total number of buildings, their values, number of people in your community, etc.?*

*What are critical facilities?*

*What other priorities should emergency managers consider?*

Assets are defined broadly to include anything that is important to the character and function of a community and can be described very generally in the following four categories:

- **People:**
  - Identify concentrations of residents and employees to help target preparedness, response, and mitigation actions.
  - Identify the types of visiting populations and their likely locations to assess potential problems.
- Identify locations and concentrations of access and functional needs populations to develop mitigation actions that will best assist them.

- Consider demographics of projected population growth to predict vulnerability.

- Identify locations that provide health or social services that are critical to disaster recovery.

- **Economy:**
  - Identify major employers, primary economic sectors (e.g., agriculture), and commercial centers whose losses or inoperability would have severe impacts on the community and its ability to recover from a disaster.
  
  - Assess dependencies between economic sectors and businesses and the infrastructure needed to support them.

- **Built environment:**
  - Identify existing structures such as buildings.

  - Develop an inventory of the location, construction standards, age, and life expectancy of specific critical infrastructure and facilities in the planning area.

  - Assess dependencies between infrastructure systems, critical facilities, and the people they serve.

  - Review state and national historic registries and identify cultural assets, such as museums, that have significance to the community.

  - Identify areas planned and zoned for future development.

- **Natural environment**
  - Identify the most valuable areas that can provide protective functions that reduce the magnitude of hazard events.

Identify critical habitat areas and other environmental features that are important to protect.

RISK ASSESSMENT – STEP 3

After you’ve created hazard descriptions and identified your community assets, the next step is the analyze risk.

ANALYZE RISK

Analyzing risk involves evaluating vulnerable assets, describing potential impacts, and estimating losses for each hazard.

Methods of analyzing risk include:

- **Exposure analysis:** This method identifies the existing and future assets located in identified hazard areas, often by using GIS for analysis and maps for visualization. Exposure analysis can quantify the number, type, and value of structures, critical facilities, and infrastructure located in identified hazard areas, as well as assets exposed to multiple hazards.

- **Historical analysis:** This method uses information on impacts and losses from previous hazard events to predict potential impacts and losses during a similar future event. This can be especially useful for weather-related hazards, such as severe winter storms, hail, and drought.

- **Scenario analysis:** This method predicts the impacts of a particular event. Scenarios can be an especially helpful tool for low frequency, high consequence events, such as earthquakes, for which historical information is not available.

The planning team will likely use a combination of methods for analyzing risk.
RISK ASSESSMENT – STEP 4

After you’ve developed the hazard descriptions, identified community assets, and analyzed each risk, the final step of risk assessment is to summarize the information on vulnerability.

SUMMARIZE VULNERABILITY

The previous three steps of the risk assessment process provide a large amount of information about your community’s vulnerability to hazards. This information needs to be summarized:

- To inform the mitigation strategy to community.
- To communicate findings to elected officials and other stakeholders to support their decision making.

One approach to summarizing the information is to develop problem statements. There could be problem statements for each hazard, or those that apply to all hazards.

The following are example problem statements:

- The North Creek Sewage Treatment Plant is located in the 100-year floodplain and has been damaged by past flood events. It serves 10,000 residential and commercial properties.
- The schools are a central focus of the community and offer opportunities to educate the public about hazards, risk, and mitigation. In addition, many school facilities are vulnerable to one or more hazards, including flooding, earthquake, tornado, and severe winter storms.
ACTIVITY 4: ANALYZING RISK AND SUMMARIZING VULNERABILITY IN QUAKEVILLE

You will work more with the Quakeville scenario in the next two units. For the purposes of this unit, you will focus on analyzing risk to some of the residential buildings in the city.
ANALYZING RISK AND SUMMARIZING VULNERABILITY IN QUAKEVILLE

Working with your table group, read the background information and answer the questions, then formulate problem statements for the given scenario.

Background Information

Quakeville is a community of 40,000 located near the Great Northern Fault. The Great Northern Fault is approximately 40 km. in length and is an extension of a larger fault system that runs nearly 200 km. northwest of Quakeville. This fault system has experienced many earthquakes this century, including several with magnitudes over 5 on the Richter scale. (Causing shaking and damage)

Quakeville is an old city, with historic buildings that date back to the early 1800s. The population is proud of its historic district and has made every effort to preserve its integrity. These older buildings are constructed of unstrengthened, unreinforced masonry. They are occupied by older residents whose families have owned them for generations, and by younger professionals who can afford the steep prices the popular historic buildings now cost. The City Council is controlled by the “old money” in the city and has to be convinced, cajoled, and argued into any kind of modernization.

Because it is near an urban area, Quakeville has become a commuter town and many of the buildings in the town are homes. Most of the homes are of wood frame construction and were built using standard construction techniques. Newer wood frame houses are generally earthquake resistant due to changes in the building codes for the area. However, many of the older homes constructed with wood or other materials such as brick, hollow clay tile, or adobe are prone to damage in moderate earthquakes. Many of the older, non-historic homes are owned by residents of a low socioeconomic status.

One of the residential areas also includes two story wood frame apartment buildings with stucco exterior facades. While stucco walls have strength and stiffness, they lack flexibility when stressed.

Municipal buildings and many of the businesses are located in a newer part of town that was built since the building codes were revised to include seismic standards. However, in a recent vulnerability study it was found that two of the older schools are at high risk of both fire and explosion should nearby crude oil pipelines fail. In addition, the community hospital is old and does not meet current building codes for seismic safety.

Questions

- The Peak Ground Acceleration (PGA) value for the city’s location is 0.25. Using the loss estimation tables on the next page, what is the expected building damage ratio for the historic homes built of unreinforced masonry?
- Using the general rule for earthquakes that contents damage will be one half of the percent structural damage, what is the expected content loss for these homes (as a percentage)?
- How many days can you expect these homes to be uninhabitable after an earthquake? (Loss of function)

**Earthquake Single Family Residence Loss Estimation Tables**

**Summarize Vulnerability**

Develop a list of problem statements based on these findings and record the problem statements on your group’s flipchart.
Completion of Risk Assessment
When is the risk assessment process considered complete?

Monitor the Risks
- Are the hazards still a threat?
- Are there other hazards not included?
- Are cascading hazards considered?
- Are any profiles missing?
- Is other information missing?
- Have threats or priorities changed?

Monitors

Mitigation Opportunities
What are the ideal times for identifying mitigation opportunities?

Completion of Risk Assessment
When is the risk assessment process considered complete?

Monitor the Risks
When reviewing the existing risk assessment and hazard profiles, determine any changes and/or gaps in the information. Consider the following questions:

- Do all of the hazards included in the risk assessment still pose a threat to the community?
- Are there hazards that are not included in the existing assessment that pose a potential threat to the community?
- Does the risk assessment specifically consider the possibility and impact of cascading hazards?
- Are any profiles missing from the risk assessment (e.g., for newly identified hazards or those for which the relative threat has increased)?
- Is any type of information generally missing from the hazard profiles?
- Has the relative threat of any hazards on the profile changed since the assessment was done?
- Have priorities changed?

Mitigation Opportunities
What are the ideal times for identifying mitigation opportunities?
ACTIVITY 5: IDENTIFYING MITIGATION OPPORTUNITIES

When a community applies for Public Assistance from FEMA, they are required to submit a Project Worksheet that includes information about the damages caused by the disaster. Completed Project Worksheets are useful historical data for mitigation planning teams.
IDENTIFYING MITIGATION OPPORTUNITIES

- Review the information below from the Project Worksheet with your table group. An image of the Project Worksheet form is included on the next page.
- List mitigation needs that are highlighted by the disaster occurrence.
- Do not consider sources of financial assistance in your discussion. Simply look for mitigation opportunities.
- Record ideas on the flipchart. Be sure to describe:
  - The disaster
  - The damages incurred
  - Mitigation opportunities
  - Your rationale

Excerpts from Project Worksheet:

Damage Description and Dimensions
Severe thunderstorm with nearby documented tornado activity removed the roof and damaged electronic controls and pumping systems to a 250 sq ft water and sewer pumping station constructed on elevated concrete pad with high quality wood frame construction and truss roof. The well cared for facility experienced significant windblown rain infiltration and catastrophic roof failure generating an electrical fire likely causing an electrical short to several hundred horsepower pumps, associated control systems and telemetry systems. Emergency repairs were not able to be conducted due to the unsafe conditions from the resulting electrical fire. Portable pumps and vacuum trucks were utilized for emergency operations until a restoration plan and alternate pumping strategies could be implemented. This area has received several severe thunderstorms over the past 4 years, each event causing significant service interruptions to the community and an adjacent hospital and not-for-profit nursing home. The re-activation of this pumping site is critical to the utility network and a cost-benefit analysis further places high values for the project at its current location.

Scope of Work
Photograph and document all of the related damages and provide asset management and repair logs on the existing site. Jim Johnson's civil engineering firm, under a recently bid service contract, has provided design and engineering services for the total reconstruction of the site to include removal of all damaged materials, examination of the well casings, as well as adjacent sewer wells, and specified the appropriate pumps, control systems, design and construction costs. Efforts under this mitigation funding request will be to utilize the existing concrete pad and location, as it is not subjected to localized flooding. Rebuild the pump station with heavy-duty concrete block construction along with a high-quality concrete roof decking to mitigate any future impacts and reoccurring damages from future storms, and minimize the potential for potable water service interruption and high-volume flow for fire protection served by this pump station. The site was insured for its present construction type and well-maintained. Rebuilding the site including more robust and weather-resistant pumping systems will exceed our insured value by $40,000.

FEMA Form 90-91, Feb 06 REPLACES ALL PREVIOUS EDITIONS.
HAZUS

Hazus has evolved into a powerful tool for mitigation and recovery planning and analysis. An increasing number of states and localities are using Hazus in the preparation of risk assessments and mitigation plans. Hazus is also being used to support post-disaster planning for recovery from hurricanes, earthquakes, and floods.

Hazus can be used by individuals and organizations with limited knowledge of hazard analysis, as well as by those with extensive expertise in the earth, building, and GIS sciences due to its diverse range of options.

UNIT SUMMARY

- Briefly review the topics discussed in this unit:
  - The risk assessment process
    - Describing hazards
    - Identifying community assets
    - Analyzing risk
    - Summarizing vulnerability
  - Monitoring the risk
  - Hazus
This page intentionally left blank.
UNIT 5: DEVELOPING MITIGATION STRATEGIES
This page intentionally left blank.
UNIT OVERVIEW

After a risk assessment has been accomplished, your community can determine appropriate options for mitigating the risks. This unit will help you understand how the results of the risk assessment are used for selecting mitigation measures.

A hazard mitigation strategy is part of the community’s overall mitigation process. It provides direction for the community’s efforts to reduce potential losses by identifying measures to mitigate the hazards identified in the risk assessment.

LEARNING OBJECTIVES

- Review the learning objectives for this unit:
  - Develop hazard mitigation goals and actions for a given scenario.
  - Identify the mitigation action types.
  - Evaluate mitigation strategies for a given scenario using a set of pre-determined criteria.

WHERE ARE WE IN THE PROCESS?

After conducting a risk assessment, the next phase in the disaster resilience process is to develop the plan, which aligns to Task 6 in the Local Mitigation Planning Handbook.

This unit will focus on the first two steps in developing a mitigation strategy. The next unit, Unit 6: Identifying and Using Mitigation Resources, will discuss the rest of the Task 6 efforts.
PHASE 3: DEVELOP THE MITIGATION PLAN

Task 6: Develop a mitigation strategy

Developing a mitigation strategy involves four steps. The first two steps in the process are:

- **Step 1** – Develop hazard mitigation goals
  - Review results of hazard analysis
  - Formulate goals
  - Get public input

- **Step 2** – Identify and prioritize mitigation actions
  - Identify alternative mitigation actions
  - Identify and analyze state and local mitigation capabilities
  - Evaluate, select, and prioritize mitigation actions

STEP 1: DEVELOP A HAZARD MITIGATION GOALS
(1 of 4)

The first step of developing a mitigation strategy is to develop hazard mitigation goals.

Goals are not intended to identify specific mitigation actions, but identify the overall improvements you want to achieve. They are general guidelines, for example:

- Protect and expand essential facilities.
- Improve the quality of life in the community.
- Ensure that public funds are used in the most efficient manner.

To develop the hazard mitigation goals and objectives, you’ll need to:

- Review results of hazard analysis
- Formulate goals
- Get public input
ACTIVITY 1: DEVELOPING MITIGATION GOALS

(1 hour)

In this activity, we'll walk through the tasks for developing goals and objectives. First, you’ll write mitigation goals for the Quakeville scenario from Unit 4.

This activity is conducted in segments, with mini-lectures provided by the instructor.

STEP 1: DEVELOP HAZARD MITIGATION GOALS

(2 of 4)

In order to develop hazard mitigation goals, review the results of the hazard analysis conducted during Phase 2. This includes reviewing the findings of the risk assessment, as well as the list of problem statements you have developed based on those findings.

STEP 1: DEVELOP HAZARD MITIGATION GOALS

(3 of 4)

A major component of developing hazard mitigation goals is to formulate goals. Goals are broad, forward-looking statements that succinctly describe your aims. Several problem statements can lead to one broad goal. An example of a goal statement to address flooding problems could be:

- Minimize losses to existing and future structures within hazard areas.

Hazard mitigation goals should be consistent with the goals of other plans in your community. Review existing plans and list the goals established in these plans to assess whether they conflict with those for reducing the effects of hazards.

Look for plans or policies that address topics that are closely related to mitigating the effects of hazards, including:
- Sustainability
- Economic growth
- Growth management
- Environmental preservation
- Historic preservation
- Redevelopment
- Health and/or safety
- Recreation
- Land use/zoning
- Public education and outreach
- Transportation
DEVELOPING GOALS

- Working with your table group, develop a goal statement to address each of the problem statements you listed.
- If your group has a long list of problem statements, for the purposes of this activity, limit your list of goals to no more than five.
- Although it won’t be possible to review other plans and policies in this activity, consider potential conflicts with local policies and plans and revise the goals as needed.
- Record your goals on your group’s flipchart.
- Be prepared to share the proposed goals with the class.
- You have 10 minutes to complete this part of the activity.
This page intentionally left blank.
STEP 1: DEVELOP HAZARD MITIGATION GOALS
(4 of 4)

Developing hazard mitigation goals also involves getting the public’s input by organizing forums and developing consensus on goals.

The more that the public or those who will be affected by your plan participate in the process, the more likely it is that they will support the process and the plan. Involve the public when developing the community’s goals and objectives to ensure fair representation of all sectors in the community.

The method you choose to use to involve the public depends on the size of your jurisdiction, the style of public input that normally is used for community issues, the established timeline, and the resources available. Ideally, the procedures you use to obtain public input should be established earlier in the planning process, when you form the planning team and secure support for the process.

GETTING PUBLIC INPUT

How can you involve the public and promote buy-in for your community’s mitigation goals and objectives?

STEP 2: IDENTIFY AND PRIORITIZE MITIGATION ACTIONS (1 of 4)

In the next step of the process for developing a mitigation plan, you will identify, evaluate, and prioritize mitigation actions that address the goals and objectives developed by the planning team in Step 1.
It is important to take time to evaluate the relative merits of alternative mitigation actions and the local conditions in which these activities would be pursued. In this way, you can be confident that the actions you end up with will have public, government, and political support, and will be the appropriate technical response to the hazard issues in your community.

The evaluation and prioritization of mitigation actions will produce a list of recommended mitigation actions to incorporate into the mitigation plan. The planning team will address a number of important questions, including:

- Which actions can help us meet our mitigation objectives?
- What capabilities do we have to implement these actions?
- What impacts (if any) will these actions have on our community?

**TYPES OF MITIGATION ACTIONS**

The primary types of mitigation actions to reduce long-term vulnerability include:

- Local plans and regulations
- Structure and infrastructure projects
- Natural systems protection
- Education and awareness programs

**LOCAL PLANS AND REGULATIONS**

Local plans and regulations refer to government authorities, policies, or codes that influence the way land and buildings are developed and built.

Examples include:

- Comprehensive plans
- Land use ordinances
- Subdivision regulations
- Development review
- Building codes and enforcement
- NFIP Community Rating System
• Capital improvement programs
• Open space preservation
• Stormwater management regulations and master plans

STRUCTURE AND INFRASTRUCTURE PROJECTS

Structure and infrastructure projects involve modifying existing structure and infrastructure to protect them from a hazard or remove them from a hazard area. This applies to public or private structures as well as critical facilities and structure.

They can also include projects to construct manmade structures to reduce the impact of hazards.

Examples include:
• Acquisitions and elevations of structures in flood prone areas
• Utility undergrounding
• Structural retrofits
• Floodwalls and retaining walls
• Detention and retention structures
• Culverts
• Safe rooms

NATURAL SYSTEMS PROTECTION

Natural systems protection minimizes damage and losses and also preserve or restore the functions of natural systems.

Examples include:
• Sediment and erosion control
• Stream corridor restoration
• Forest management
• Conservation easements
• Wetland restoration and preservation
EDUCATION AND AWARENESS PROGRAMS

Education and awareness programs inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs.

Examples include:

- Radio or television spots
- Websites with maps and information
- Real estate disclosure
- Presentations to school groups or neighborhood organizations
- Mailings to residents in hazard-prone areas.
- StormReady
- Firewise Communities

STEP 2: IDENTIFY AND PRIORITIZE MITIGATION ACTIONS (2 of 4)

The purpose of identifying alternative mitigation actions is to determine a variety of possible actions to address the mitigation objectives you developed in Step 1. Activities may include:

- **Reviewing existing literature and resources** – Identify alternative actions that may achieve these mitigation goals. Existing literature can help identify alternative mitigation actions and shed light on specific issues to consider when you evaluate the alternatives later. A number of publications, Web site, and other resources provide information on the structural integrity, specific design features, and approximate cost ranges of actions.

- **Reviewing success stories** – Other communities or states may have already addressed the same problems and developed a solution that may also work for your community. You can find out what other communities have done by asking your State Hazard Mitigation Officer or reviewing the best practices guides available from FEMA.
• **Soliciting opinion and input** – Surveys or questionnaires are very effective tools for gathering information on potential alternative mitigation actions that would be acceptable or preferred by community residents. By using these methods, you can foster involvement among citizens, including those who don’t attend meetings. A survey or questionnaire can be included in a utility bill mailing, conducted door-to-door, or posted on a community Web site. Volunteers can help to reduce the costs of these techniques.

• **Summarizing your findings** – The planning team will use the results of identifying and prioritizing mitigation actions to evaluate the alternative mitigation actions at the end of Phase 3. Any background information the planning team discovers along the way regarding the implications of various alternatives should be available to the whole planning team for consideration in the next task.

**ACTIVITY 2: IDENTIFYING MITIGATION TYPE**

**STEP 2: IDENTIFY AND PRIORITIZE MITIGATION ACTIONS (3 of 4)**

The next component of Step 2 involves reviewing and analyzing state and local programs, policies, regulations, funding, and practices currently in place that either facilitate or hinder mitigation in general, including how the construction of buildings and infrastructure in hazard-prone areas is regulated.

You will also learn how your local, tribal, and state governments are structured in terms of professional staff...
that would be available to directly carry out mitigation actions, or to provide technical assistance. This inventory and analysis is often called a capability assessment. By completing this assessment, you will learn how or whether your community will be able to implement certain mitigation activities by determining:

- Types of mitigation actions that may be prohibited by law
- Limitations that may exist on undertaking actions
- The range of local and/or state administrative, programmatic, regulatory, financial, and technical resources available to assist in implementing your mitigation strategy

This information will feed directly into the analysis of the specific mitigation actions you will undertake in the last component of Step 2.

In the previous unit, Task 4 within Phase 2 involved the planning team reviewing existing capabilities for reducing long-term vulnerability to hazards. Those capabilities should now be assessed to identify gaps to be addressed and strengths to enhance through new mitigation actions.

**STEP 2: IDENTIFY AND PRIORITIZE MITIGATION ACTIONS (4 of 4)**

In this component of Step 2, the planning team will select mitigation actions suitable to your community and then decide in what sequence or order these actions should be pursued.

This section of your training will address some suggested methods for evaluating and prioritizing the alternative mitigation actions previously identified.
THE STAPLE CRITERIA

One set of criteria that is used for making such planning decisions is identified by the acronym STAPLE.

These criteria consider the impacts of a proposed course of action. There is no implied priority or weight to the criteria.

- **Social** – To be successful, the mitigation strategy must be socially acceptable.
- **Technical** – The proposed action must be technically feasible, cost-effective, and useful.
- **Administrative** – The community must have the capability to implement the action and accomplish it in a timely manner.
- **Political** – Public support is needed both to implement and maintain the measure.
- **Legal** – The community must have the authority to implement the proposed measure.
- **Economic** – Economic considerations must include the present economic base, projected growth and opportunity costs, and community plans for economic development.
- **Environmental** – Impact on the environment is an important consideration because of the many statutory considerations, and because of public desire for sustainable and environmentally healthy communities.

After you have evaluated the potential alternative mitigation actions, return to those actions that the planning team has determined to be appropriate for your community.

Clean up the comment notes or expand them to explain any special circumstances that must be kept in mind in the next step. For example, if you found that one action is more effective when undertaken in conjunction with another, then note this fact.
After generating a list of acceptable mitigation actions, the list must be prioritized so the planning team can determine where to begin.

Some common ways to rank mitigation actions are:

- Ease of implementation
- Multi-objective actions
- Time
- Funding availability

**ACTIVITY 4: MITIGATION SOLUTIONS FOR QUAKEVILLE**

In this activity, you have the opportunity to walk through the process of selecting the best mitigation solutions to a fictitious community’s hazard risk problems.
MITIGATION SOLUTIONS FOR QUAKEVILLE

- Review the mitigation goals and objectives you developed for the Quakeville scenario.
- Working with your group, suggest 4-5 mitigation measures that can apply to the scenario.
- Evaluate these measures based on the STAPLE criteria. A set of questions to consider for each criterion is included on the next page.
- Based on your evaluation, suggest a mitigation strategy for the Quakeville community.
- Take about 30 minutes to work on your solution.
- Assign a group spokesperson to report your group’s findings to the class.

</tbody>
</table>
UNIT SUMMARY

- Briefly review the topics discussed in this unit:
  - Mitigation goals and actions
  - Steps to take in mitigation strategy development
  - STAPLE criteria
This page intentionally left blank.
UNIT 6: IDENTIFYING AND USING MITIGATION RESOURCES
This page intentionally left blank.
UNIT OVERVIEW

This unit continues to explore Phase 3, which is developing a mitigation strategy. This unit will provide information on how to identify and use mitigation resources.

LEARNING OBJECTIVES

- **Review** the learning objectives for this unit:
  - Describe the roles and responsibilities for mitigation among all levels of government and the private sector.
  - Create a list of federal, state, local, and private sector mitigation funding resources.
  - Develop a proposal for obtaining financial aid and technical resources needed to carry out a mitigation strategy for a given scenario.

WHERE ARE WE IN THE PROCESS?

As we’ve discussed in the previous unit, Phase 3 focuses on developing a mitigation strategy. So far, we’ve learned the details of developing mitigation goals and actions, as well as prioritizing them.

In this unit, we will continue learning about completing mitigation strategy development in Phase 3.

There will be a variety of hazard mitigation actions in the mitigation strategy and multiple ways to adopt and implement them.

- Some actions will be accomplished by the public sector, and some through the private sector.
Some can be accomplished pre-disaster, and some will not be feasible until after a disaster when post-disaster funding sources are available. Some can be done in the short term, and others may require years to accomplish.

PHASE 3: DEVELOP THE MITIGATION PLAN

Task 6: Develop a mitigation strategy

In the previous unit, we’ve discussed the first two steps of developing a mitigation strategy:

- **Step 1** – Develop hazard mitigation goals
- **Step 2** – Identify and prioritize mitigation actions

The remaining steps include:

- **Step 3** – Prepare an implementation strategy
  - Identify how the mitigation actions will be implemented
  - Document the implementation strategy
  - Obtain the consensus of the planning team
- **Step 4** – Document the mitigation planning process
  - Make decisions about the style of the document
  - Write the plan
  - Review the plan

STEP 3: PREPARE AN IMPLEMENTATION STRATEGY (1 of 4)

After developing hazard mitigation goals and identifying and prioritizing mitigation actions, the third step of developing a mitigation strategy is to prepare an implementation strategy. This involves:
STEP 3: PREPARE AN IMPLEMENTATION STRATEGY (2 of 4)

The first component of preparing an implementation strategy is identifying how the mitigation actions will be implemented. This involves:

- Identifying parties, define responsibilities, and confirm partners
- Identifying resources to implement the actions
- Defining the time frame for implementing the actions

RESOURCES FOR MITIGATION IMPLEMENTATION

Pre-disaster, local budgets rarely include money for mitigation. Local governments may even be willing to acknowledge hazard risks, but have too many other high visibility, high priority goals to accomplish.

How, then, are mitigation strategies accomplished?

Mitigation must be accomplished in conjunction with other community goals, and not addressed in a vacuum.

A well-selected community mitigation planning team can be very helpful in accomplishing this requirement. The team that represents a wide variety of community concerns and interests will be able to identify a range of opportunities for accomplishing mitigation along with other community goals.

Funding Sources

Individuals or organizations responsible for implementing the community’s mitigation plan must be familiar with sources of funding and other assistance for mitigation.
These sources may include:
- Local government
- Private sector
- Nonprofit organizations
- State government
- Federal government

We’ll discuss funding sources more specifically later in this unit.

**Technical Assistance**

Emergency managers are not expected to be the technical experts for mitigation. However, the job of coordinating a mitigation program may very well belong to the emergency manager.

Technical experts will be needed to plan and implement many of the mitigation measures we have discussed.

**MITIGATION RESPONSIBILITIES**

When discussing sources of funding and technical assistance for mitigation, the assumption is sometimes made that the Federal government is responsible for mitigation and should pay all of the bills. This is not a valid assumption.

The National Mitigation Framework describes roles and responsibilities for mitigation among all levels of government and the private sector.

**Local Government**

Local governments should understand the hazards that may exist in their communities, and it is their responsibility to initiate mitigation action.

Local governments must do everything possible to protect their citizens from hazard risks, including:
Enacting and enforcing building codes, zoning ordinances, and other measures to protect life and property

Making the public aware of hazards that present risks to people and property, and measures they can take to reduce the risk of loss

Complying with Federal and other regulations that are designed to reduce losses.

Mitigation is a local responsibility; other levels of government support the local effort.

**Private Sector**

At a minimum, businesses, private organizations, and individual homeowners have a responsibility to:

- Comply with applicable zoning and land use regulations.
- Take other measures, as necessary and possible, to reduce or eliminate damage from known hazards.

These groups have much to gain by reducing their risks to hazards.

Businesses and other private interests may be willing to contribute time, labor, materials or other support if they are convinced that the mitigation effort will benefit their organization as part of an overall community improvement.

**State Government**

The State is required to uphold Federal regulations intended to reduce hazard losses. The State also must:

- Provide resources to achieve these goals
- Emphasize to its constituents the importance of substantially reducing the risk of:
  - Loss of life
  - Injuries
- Economic costs
- Destruction of natural and cultural resources

State assistance may be available for projects that meet State level goals and can simultaneously reduce long-term hazard risks.

Federal Government

Federal agencies are expected to:

- Take the lead in mitigation by evaluating their own facilities and ensuring that they are designed, constructed, and upgraded to reduce the impact of future hazard events.
- Collaborate with academia, national standards and code-writing groups, and the private sector to speed the development and application of mitigation technologies.
- Support applied research on priority mitigation issues.
- Administer programs that are intended to support and encourage local efforts to mitigate hazard losses.

*How do the local government and private sector in your community view their responsibilities in mitigation?*
PANEL DISCUSSION: FEDERAL, STATE, LOCAL, TRIBAL, AND TERRITORIAL RESOURCES

ACTIVITY 1: IDENTIFYING MITIGATION RESOURCES
IDENTIFYING MITIGATION RESOURCES

- Working with your table groups, create a list of resources for mitigation actions.
  - If you record your list on your group’s flipchart, be sure to turn the flipchart so no other groups can see it, because you are competing with the other groups in this activity.
  - Include the ideas you heard from the panel members and add any others you have used or read about.
  - Be imaginative and innovative.
  - Separate your list into the four categories listed below.
- The group with the most points wins.
  - Each local resource is worth 4 points.
  - Each private resource is worth 3 points.
  - Each State resource is worth 2 points.
  - Each Federal resource is worth 1 point.
- You have 20 minutes to complete your list.
This page intentionally left blank.
MITIGATION RESOURCES PRE- AND POST-DISASTER

Programs that provide financial and technical assistance resources for mitigation activities may be divided in three categories.

- **Pre-disaster programs**
  - These programs exist without a disaster declaration and support pre-disaster mitigation activity.

- **Post-disaster programs**
  - These programs generally require a Presidential disaster declaration to become applicable.

- **Disaster-applicable programs**
  - These programs exist pre-disaster for non-emergency purposes, but may be redirected after a disaster declaration.

You can find the tables of Technical and Financial Mitigation Resources in Appendix D of the Student Manual.

STEP 3: PREPARE AN IMPLEMENTATION STRATEGY (3 OF 4)

Determine the format for presenting your implementation strategy. This, along with discussions of goals and objectives, and identification and prioritization of actions, will comprise your overall mitigation strategy.

One example format that the planning team can use is listed on the slide.

- **Action:** This comes from your list of actions.
- **Goal(s) addressed:** Sometimes the action will address more than one goal and objective.
- **Lead agency:** Provide the name and a brief description of the agency.
**Support agency or agencies:** Provide the name and a brief description of each support agency.

**Budget:** Provide the dollar amount or an estimate, if known. Put TBD (to be determined) if not known. Indicate staff time if staff will be used.

**Funding source(s):** List the funding sources (e.g., operating budget, capital improvement budget, XYZ grant, XYZ foundation, etc.).

**Start and end date:** Indicate start and end dates; short-term, long-term, or ongoing; and milestones for longer term projects.

---

**STEP 3: PREPARE AN IMPLEMENTATION STRATEGY (4 OF 4)**

The planning team should review the resulting strategy and come to a consensus on the timing of the mitigation actions and on the agencies or other parties responsible.

When the team confirms that the timeline and use of resources are realistic, and the appropriate agencies or individuals are designated the appropriate responsibilities, it confirms that the strategy is headed in the right direction.

**ACTIVITY 2: SELECTING MITIGATION RESOURCES FOR QUAKEVILLE**

You can use the following criteria to determine which resources are most useful for the mitigation strategies chosen for a community:

- Which choice is most consistent with the multi-objective goals of the community?
- When will the resources be most useful (e.g., pre-disaster or post-disaster)?
- Can the community meet any conditions such as matching funds?
- Can the community handle the administrative requirements?
This page intentionally left blank.
SELECTING MITIGATION RESOURCES

- Working with your table group, review the Quakeville mitigation strategy you developed in the previous unit.
- Create two columns on your group’s flipchart and label the columns “Resource” and “Action.”
- Develop a proposal for obtaining the financial and technical resources needed to carry out the strategy. To do this, list on the flipchart the resources needed and the actions you propose to take to obtain those resources.
- You have 15 minutes to develop the proposal.
- Be prepared to present your proposal to the full group.
This page intentionally left blank.
STEP 4: DOCUMENT THE MITIGATION PLANNING PROCESS (1 OF 4)

The hazard mitigation plan is a guide to keep you on track and serves as documentation of the thoughts and considerations that were the foundation of the planning process. As community leadership changes, and during intense decision-making situations (such as the post-disaster setting and when undertaking major land development decisions), the plan will serve as the representation of the community’s principles for hazard loss reduction.

STEP 4: DOCUMENT THE MITIGATION PLANNING PROCESS (2 OF 4)

Make decisions about the style of the document.

- Decide how to make the document readable, in terms of:
  - Length
  - Format/sections
  - Language level
- Determine how detailed the planning document should be.
- Establish the schedule for writing the plan.
- Determine who should write the plan.

STEP 4: DOCUMENT THE MITIGATION PLANNING PROCESS (3 OF 4)

Write the plan.

- Assemble information and write-ups from previous phases of the process, to include:
  - Meeting notes that document the planning process
  - Risk assessment and capability assessment findings and results
- Your mitigation strategy
- Other existing plans, models, and state and program requirements to provide an organizational framework
  - Write the plan in conformance with FEMA program requirements.

By following the four-phase process with 9 tasks described in this course, you are undertaking a planning process that conforms to several FEMA mitigation plans.

However, you should always refer to program guidelines for the specific program to which you are applying. Refer to the table called “Hazard Mitigation Planning Process - Crosswalk,” located in Appendix E in your Student Manual for suggestions on how to organize your plan.

STEP 4: DOCUMENT THE MITIGATION PLANNING PROCESS (4 OF 4)

Review the plan.

- **Planning team review:** The planning team should have an opportunity to review the plan and provide comments.
- **Agency review:** Agencies involved in plan implementation should receive a draft copy for review.
- **Public review:** Whether a public forum to review the plan is held following the receipt of agency comments, or concurrently as agencies review the draft, the public should have an opportunity to review the draft plan before it is presented for formal adoption.

Provide a draft copy to your State Hazard Mitigation Officer (SHMO) for review prior to formal local adoption to see if the plan meets state and federal requirements.

FEMA mitigation staff should review the document prior to formal local adoption to ensure that the
governing body is acting on a document that meets federal requirements.

- **Final draft**: After comments have been received, revise the plan and prepare a final draft. Once comments from all relevant parties have been incorporated, you are ready for the next step: Presenting the plan to your local government body for adoption.

**UNIT SUMMARY**

- Briefly review the topics discussed in this unit:
  - Responsibilities for mitigation
  - Mitigation resources
  - Proposal for obtaining resources
This page intentionally left blank.
UNIT 7: IMPLEMENTING AND MAINTAINING A MITIGATION PLAN
UNIT OVERVIEW

In earlier units we discussed the role of the emergency manager in mitigation and the importance of creating disaster-resilient communities. We have discussed the need for identifying opportunities, solutions, and resources for mitigation.

LEARNING OBJECTIVES

- Review the learning objectives for this unit:
  - Analyze your community’s planning efforts.
  - Identify deficiencies in your community’s mitigation planning efforts.

ACTIVITY 1: ANALYZING YOUR COMMUNITY’S PLANNING EFFORTS
ANALYZING YOUR COMMUNITY’S PLANNING EFFORTS

As the instructor reviews each step in the disaster resilience process, use the following checklists to evaluate your community’s mitigation efforts.

For each action item, check the appropriate status:

- Needs Development (ND)
- Needs Updating (NU)
- Sufficient/Satisfactory (S)

REVIEW OF THE DISASTER RESILIENCE PROCESS

What are the tasks performed during this phase?

- Determine the planning area and resources
- Build the planning team
- Create an outreach strategy

What are the tasks performed during this phase?

- Determine the planning area and resources
- Build the planning team
- Create an outreach strategy
What is the task performed during this phase?

- Determine the planning area and resources
- Build the planning team
- Create an outreach strategy

WHERE ARE WE IN THE PROCESS?

The fourth phase of the disaster resilience process involves implementing the plan and monitoring progress.

During this phase, the mitigation planning team will:

- Keep the plan current
- Review and adopt the plan

In this unit, we'll look more closely at the steps in Phase 4. You'll complete the checklist for this phase at the end of this unit.

PHASE 4: IMPLEMENT AND MONITOR

Task 7: Keep the plan current

The mitigation plan should be kept current as conditions change, new information becomes available, or actions progress over the life of the plan.
Plan maintenance process allows planning team members to track progress of the plan. This involves:

- Monitoring implementation
- Evaluating effectiveness
- Updating the plan

As you keep the mitigation plan current, you must also continue to provide the public opportunities to be involved. Refer to Task 3 in Unit 3 for public outreach strategies.

**Task 8: Review & adopt the plan**

Reviewing and adopting the plan involves three steps:

- **Step 1**: Review the plan
- **Step 2**: Adopt the plan
- **Step 3**: Evaluate and revise the plan

**REVIEWING & ADOPTING THE PLAN**

Step 1 of Task 8: Reviewing and adopting the plan involves:

- Publicizing the plan and soliciting feedback from stakeholders and the public
- Submitting the plan for State and FEMA review

Step 2 of Task 8: Reviewing and adopting the plan involves:

- Confirming and clarifying responsibilities
- Beginning to integrate mitigation actions
- Monitoring and documenting implementation
- Establishing indicators of effectiveness
- Celebrating success
Step 3 of Task 8: Reviewing and adopting the plan involves:

- Evaluating the effectiveness of the planning process and strategies
- Evaluating the effectiveness of actions
- Determining why the actions worked or did not work
- Analyzing your findings and determine whether to revise the process or strategy
- Incorporating your findings into the plan

ACTIVITY 1: EVALUATING YOUR PLAN
# EVALUATING YOUR PLAN

Use the table below to evaluate your community’s mitigation plan.

<table>
<thead>
<tr>
<th>Criteria</th>

</table>
ACTIVITY 2: ANALYZING YOUR COMMUNITY’S PLANNING EFFORTS

ACTIVITY 3: ACTION ITEM LIST

UNIT SUMMARY

- Briefly review the topics discussed in this unit:
  - Mitigation plan implementation and maintenance
  - Analysis of community planning efforts
  - Action plan to address deficiencies
This page intentionally left blank.
UNIT 8: POST-DISASTER MITIGATION ACTIVITY
This page intentionally left blank.
UNIT OVERVIEW

Up to this point in this course, we have emphasized the importance and desirability of planning and implementing mitigation actions before a disaster occurs.

The exercise in this unit will provide an opportunity for you to examine the mitigation opportunities and requirements that exist after a disaster occurs.

LEARNING OBJECTIVES

- Review the learning objective for this unit:
  - Develop mitigation strategies in a given post-disaster scenario.

ACTIVITY OVERVIEW

This exercise will allow you to work with your table group to analyze a scenario and solve for a flooding problem. This exercise will be conducted in the following sections:

- Background
- Damages and Impacts
- Mitigation Strategy
- Reporting Session

PART 1: BACKGROUND
This page intentionally left blank.
GROUP EXERCISE: PART 1

Read the background information about the city of Waterville and follow the instructions that appear below.

Background Information

Like many riverside communities around the nation, the folks who founded Waterville had not knowingly developed their village in a floodplain. In 1857 a sawmill was built on the banks of the Kickapoo. The river supplied mechanical power and floated logs to the mill from upriver, where loggers harvested trees from the Kickapoo Valley’s hilly, heavily wooded terrain. The mill gradually became the nucleus of a town. By 1888, the settlement, with its own post office and about 300 citizens, incorporated. At the turn of the century, the villagers’ dependence upon the river deepened. Two businessmen built the Kickapoo Valley's first hydroelectric plant, furnishing electricity to the hamlet.

No one remembers any flooding in the early years of the community's life. But gradually, as loggers cleared the upstream terrain, the watershed's ability to absorb rainfalls and snow melts diminished. Eroded soil carried by the runoff settled in the Kickapoo's riverbed so that it could not contain as much water. The village's first recorded flood occurred in 1907. More floods hit in 1912 and 1917.

As highways, parking lots, streets and buildings were constructed in the Kickapoo Valley watershed, they too contributed to runoff by covering up the earth so it could not easily absorb water.

The first flood that would be classified as a disaster occurred in 1935, severely damaging buildings in Waterville and the Kickapoo Valley's other riverside communities. Valley residents realized that flooding was a serious and potentially recurring problem. Waterville and several other Kickapoo communities petitioned Congress in the late 1930s for a flood control project. Congress ordered the Corps of Engineers to study flood control options in the valley. Interrupted by World War II and the Korean War, then spurred by the 1951 flood, those studies continued for years. Finally, Congress authorized the Corps to build a dam and recreational lake 36 miles upriver from Waterville. Since the dam was so far away, it would protect only about nine percent of Waterville's floodplain land. The Corps proposed that a levee be built around the village.

It took many more years before the Corps of Engineers began purchasing farmland for the new dam and lake and preparing it for construction. But by the time the work began, environmental consciousness was growing strong around the nation and Congress had passed the National Environmental Policy Act. Environmentalists quickly challenged the Kickapoo River dam, alleging in a lawsuit that the Corps had not done sufficient environmental impact studies on the project.
The controversy intensified. Although environmentalists were unsuccessful in their lawsuits, their objections forced several reviews of the project and eventually encouraged the Governor and the members of the State's congressional delegation to begin questioning the dam. Meanwhile, the Corps continued work, spending more than $18 million on land purchases and construction of the dam itself.

State and Federal officials began pressuring Waterville to pass a floodplain-zoning ordinance, or face a cutoff of Federal grants and loans within the floodplain. For communities with few or relatively unimportant buildings in the floodplain, such an ordinance wasn't much of a hardship. But in Waterville, it hurt. The village's entire central business district - including nearly 40 commercial and municipal buildings - and 22 residences were in the floodplain. Floodplain zoning could mean the death of the community's economic heart.

The villagers viewed floodplain zoning as even more threatening than the Kickapoo River. Nevertheless, the village passed floodplain zoning under protest, hoping that the dam and levee would be completed, and floodplain zoning eventually could be removed.

Instructions

- Select a group spokesperson. This person has been hired by the Village of Waterville as a part-time emergency manager.
- The rest of the group members serve as members of the mitigation planning team.
- The planning team is charged with the responsibility to coordinate an effort to solve the community's repetitive flooding problems.
- Record your plan of action on your group’s flipchart, including the following information:
  - Types of organizations on the planning team
  - A brief description of process for developing a mitigation program
- Do not develop a complete mitigation strategy at this point.
- A street map and a floodplain map of Waterville are included on the next page.

The maps on the following page were adapted from William S. Becker's case study, “Come Rain, Come Shine.”
Map of Waterville

Waterville Floodplain Map

PART 2: DAMAGES AND IMPACTS
This page intentionally left blank.
GROUP EXERCISE: PART 2

Read the information about damages and impacts, and then follow the instructions.

Damages and Impacts

In July, intense rainstorms resulted in the worst flood damage Waterville had ever experienced. Preliminary damage assessment estimated total public and private damages in Waterville at over one million dollars. Flooding affected all of the property and structures in the floodway and the flood fringe.

Eight of the 39 commercial structures in the floodplain were more than 50% damaged, including a new, concrete-block bank. Every business received some damage. Seven of the 22 floodplain residences were destroyed. All received flood damage. High winds associated with the storms also resulted in lost electric power in Waterville for almost a week.

The continued heavy rains aggravated the situation as the ground was already saturated. Roads and highways throughout the affected area were flooded and temporarily closed. Businesses had to halt operations again because of flood damage and because so many employees were unable to get to work. Two deaths and several injuries were attributed to the storms.

Instructions

Work in your table groups to answer the following questions:

- What is your policy for repairing/replacing damaged buildings?

- Do you anticipate any problems in processing permits for repairs?

- How will you handle the increased need for building inspectors?
This page intentionally left blank.
PART 3: MITIGATION STRATEGY

While the recent flood has been a terrible disaster, it presents mitigation opportunities that were not available prior to the declaration. This is a chance for Waterville to develop and implement a plan for long-term alleviation of its repetitive flooding problems.
This page intentionally left blank.
GROUP EXERCISE: PART 3

Instructions

Work in your table groups to complete the following actions:

- Identify any mitigation measures that are already in place and describe how effective they have been.

- Brainstorm several mitigation measures that might prevent these disaster damages in the future. Refer to Unit 5 for ideas. List at least four feasible measures.

- Evaluate your choices using the STAPLE criteria reviewed in Unit 5.

- Select one or more mitigation measures that satisfy the STAPLE criteria, and develop your overall mitigation strategy.

- Research all possible resources for funding and technical assistance to implement the measures you have selected.
  - Refer to Unit 6 for information about funding sources and list every one that you believe Waterville is eligible for and why.
  - Because you do not know whether the State will receive a Presidential disaster declaration, have a funding strategy prepared for either event.

- Prepare to present the strategy to the representatives of the resource agencies you will approach for financial and/or technical assistance. You will make this presentation through a role play activity in Part 4 of the activity.
This page intentionally left blank.
PART 4: REPORTING SESSION

The goal of this reporting session is to demonstrate how you would present your mitigation plan to community leaders.

This reporting session will consist of a role-play in which the group spokesperson plays the part of the Waterville emergency manager and other group members will play the part of other planning team members. Instructors and class members will role play representatives of the organizations from whom you may be seeking technical or financial assistance, as well as community members.

REAL-LIFE PROPOSED SOLUTION

The scenario for this activity was adapted from William S. Becker’s case study on Soldiers Grove, Wisconsin, called “Come Rain, Come Shine.” (This link can also be accessed at the following URL: http://dnr.wi.gov/topic/floodplains/documents/comeraincomeshine.pdf.)

The solution we’re about to discuss comes directly from the case study.

- U.S.A.C.E. recommended a levee that would cost $3.5 million to construct.
- Maintenance of the levee would cost approximately $10,000 per year.

For more mitigation case studies, refer to FEMA’s Best Practices Portfolio. (This link can also be accessed at the following URL: https://www.fema.gov/mitigation-best-practices-portfolio.)
PROBLEMS WITH PROPOSED SOLUTION

- The value of the property in the floodplain was less than $1 million.
- The community’s population and economy were declining.

ALTERNATIVE SOLUTION

- Community members proposed relocation of the downtown businesses to higher ground.
- Acquired property would become recreational areas to draw tourists and serve local needs.
- Homes in the floodplain were acquired and relocated or demolished, and some homes along the fringe were floodproofed or elevated through no-interest, deferred-payment loans from the village to homeowners.
- Funding was obtained through a variety of local, state, and federal sources.

The Kickapoo River still floods, as shown in the photo on the slide. However, now there is a park where the downtown business once stood, so the damages are much less costly.

SOLAR VILLAGE

- Due to the growing energy crisis, the village incorporated solar heating in all the new buildings.
- Today, Soldiers Grove uses solar energy to supply at least half of the village’s heating needs.
- Solar Village was established and has emerged as a model solar-city that attracts growing attention from communities and curiosity-seekers around the country.
UNIT SUMMARY

- Briefly review the topics discussed in this unit:
  - Organizing a planning team
  - Anticipating post-disaster problems
  - Proposing mitigation measures
  - Evaluating actions with STAPLE criteria
  - Identifying funding and technical resources
This page intentionally left blank.
UNIT 9: MOVING FORWARD WITH MITIGATION
This page intentionally left blank.
UNIT OVERVIEW

During this course, we have discussed several complications related to mitigation and the strategies and solutions that can be used to help overcome these obstacles.

LEARNING OBJECTIVES

- Review the learning objective for this unit:
  - Identify solutions to overcome common challenges to achieving mitigation goals.

CREATING A SAFE AND RESILIENT COMMUNITY

What may be some challenges to achieving mitigation goals?

Some approaches to consider to continue mitigation efforts to create a safe and resilient community include:

- Use the post-disaster window of opportunity
- Focus on quality over quantity
- Develop strong messaging
- Encourage local champions
- Identify a mentor
When faced with financial challenges, consider the following:

- Local funding and private property owners
- State funding and assistance
- FEMA mitigation grant programs & technical assistance
- Assistance from other Federal agencies

UNIT SUMMARY

- Briefly review the topic discussed in this unit:
  - Ways to overcome common challenges

ACTIVITY 1: REVIEW OF COURSE OBJECTIVES

Let's review the objectives of this course.

Why is the actual mitigation role of the emergency manager different from the optimal role?
REVIEW OF COURSE OBJECTIVES – Unit 3

- Determine strategies to build support for mitigation in a community.
  - Did the course cover this objective thoroughly?
  - Do you believe you can accomplish the task described in the objective?
  - Is there anything you’re still confused about related to this objective?

Who are some of your community’s potential stakeholders in mitigation?

REVIEW OF COURSE OBJECTIVES – Unit 4

- Analyze hazard risks for a given scenario.
  - Did the course cover this objective thoroughly?
  - Do you believe you can accomplish the task described in the objective?
  - Is there anything you’re still confused about related to this objective?
What are the steps in the risk assessment process?

**REVIEW OF COURSE OBJECTIVES – Unit 5**

- Develop a mitigation plan implementation strategy for a given scenario.
  - Did the course cover this objective thoroughly?
  - Do you believe you can accomplish the task described in the objective?
  - Is there anything you’re still confused about related to this objective?

What are the STAPLE criteria for screening mitigation planning decisions?
REVIEW OF COURSE OBJECTIVES – Unit 6

- Develop a proposal for obtaining financial aid and technical resources needed to carry out a mitigation strategy for a given scenario.
  - Did you cover it?
  - Can you do it?
  - Do you have any questions?
  - Did the course cover this objective thoroughly?
  - Do you believe you can accomplish the task described in the objective?
  - Is there anything you’re still confused about related to this objective?

What are the responsibilities of each level of government in accomplishing mitigation?

REVIEW OF COURSE OBJECTIVES – Unit 7

- Evaluate the effectiveness of a community’s mitigation planning efforts.
  - Did the course cover this objective thoroughly?
  - Do you believe you can accomplish the task described in the objective?
  - Is there anything you’re still confused about related to this objective?
How would you address deficiencies in your community’s mitigation plan?

REVIEW OF COURSE OBJECTIVES – Unit 8 & 9

- Recommend actions to optimize the mitigation role of the emergency manager.
  - Did the course cover this objective thoroughly?
  - Do you believe you can accomplish the task described in the objective?
  - Is there anything you’re still confused about related to this objective?

What solutions do you now have for overcoming the obstacles to successful mitigation in your community?

COURSE WRAP-UP

Instructor will distribute final exam, course evaluation forms, and certificates.
## APPENDIX A: GLOSSARY

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acquisition of hazard-prone structures</td>
<td>Local governments can acquire lands in high hazard areas through conservation easements, purchase of development rights, or outright purchase of property.</td>
</tr>
<tr>
<td>All-Hazards</td>
<td>Describing an incident, natural or manmade, that warrants action to protect life, property, environment, and public health or safety, and to minimize disruptions of government, social, or economic activities.</td>
</tr>
<tr>
<td>Applicant</td>
<td>State agency, local government, or any political subdivision of the State, including Indian tribes and Alaskan native villages, that applies for FEMA post-disaster assistance. Also, private nonprofit organizations that include medical, emergency (fire and rescue), utility, educational, custodial care, zoos, community centers, libraries, homeless shelters, senior citizens centers, and sheltered workshops.</td>
</tr>
<tr>
<td>Base Flood Elevation (BFE)</td>
<td>Elevation of the base flood in relation to a specified datum, such as the National Geodetic Vertical Datum of 1929. The Base Flood Elevation is used as a standard for the National Flood Insurance Program.</td>
</tr>
<tr>
<td>Benefit</td>
<td>Net project outcomes, usually defined in monetary terms. Benefits may include direct and indirect effects. For the purposes of conducting a benefit-cost analysis of proposed mitigation measures, benefits are limited to specific, measurable risk reduction factors, including a reduction in expected property losses (building, contents, and function) and protection of human life.</td>
</tr>
<tr>
<td>Benefit-Cost Analysis (BCA)</td>
<td>A systematic, quantitative method of comparing the projected benefits to projected costs of a project or policy. It is used as a measure of cost-effectiveness.</td>
</tr>
<tr>
<td>Building</td>
<td>A structure that is walled and roofed, principally above ground and permanently affixed to a site. The term includes a manufactured home on a permanent foundation on which the wheel and axles carry no weight.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-----------------------------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Capability assessment</strong></td>
<td>An assessment that provides a description and analysis of a community or state’s current capacity to address the threats associated with hazards. The capability assessment attempts to identify and evaluate existing policies, regulations, programs, and practices that positively or negatively affect the community or state’s vulnerability to hazards or specific threats.</td>
</tr>
<tr>
<td><strong>Coastal zone</strong></td>
<td>The area along the shore where the ocean meets the land as the surface of the land rises above the ocean. This land/water interface includes barrier islands, estuaries, beaches, coastal wetlands, and land areas with direct drainage to the ocean.</td>
</tr>
<tr>
<td><strong>Community Emergency Response Team (CERT)</strong></td>
<td>CERT is the mechanism to establish, train and maintain a local cadre of residents to act as first responders in the event of an emergency. A CERT team is especially critical in the first three days following a disaster when conditions may prevent access by emergency response personnel.</td>
</tr>
<tr>
<td><strong>Community Hazard Mitigation Planning Team</strong></td>
<td>A local hazard mitigation planning team composed of government and private-sector individuals with a variety of skills and areas of expertise, usually appointed by the city or town manager, or chief elected official. The group uses these skills to find solutions to community hazard mitigation needs and gain community acceptance of those plans.</td>
</tr>
<tr>
<td><strong>Community Rating System (CRS)</strong></td>
<td>CRS is a program that provides incentives for National Flood Insurance Program communities to complete activities that reduce flood hazard risk. When the community completes specified activities, the insurance premiums of these policyholders in communities are reduced.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-----------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Comprehensive plan</td>
<td>A document, also known as a “general plan,” covering the entire geographic area of a community and expressing community goals and objectives. The plan lays out the vision, policies, and strategies for the future of the community, including all of the physical elements that will determine the community’s future development. This plan can discuss the community’s desired physical development, desired rate and quantity of growth, community character, transportation services, location of growth, and siting of public facilities and transportation. In most states, the comprehensive plan has no authority in and of itself, but serves as a guide for community decision-making.</td>
</tr>
<tr>
<td>Cost-effectiveness</td>
<td>Cost-effectiveness is a key evaluation criterion for federal grant programs. Cost-effectiveness has several possible definitions, although for grant-making purposes FEMA defines a cost-effective project as one whose long-term benefits exceed its costs. That is, a project should prevent more expected damages than it costs initially to fund the effort. This is done to ensure that limited public funds are used in the most efficient manner possible. Benefit-cost analysis is one way to illustrate that a project is cost-effective.</td>
</tr>
<tr>
<td>Critical facilities</td>
<td>Facilities vital to the health, safety, and welfare of the population and that are especially important following hazard events. Critical facilities include, but are not limited to, shelters, police and fire stations, and hospitals.</td>
</tr>
<tr>
<td>Debris</td>
<td>The scattered remains of assets broken or destroyed in a hazard event. Debris transported by a wind or water hazard event can cause additional damage to other assets.</td>
</tr>
<tr>
<td>Declaration</td>
<td>Presidential finding that a jurisdiction of the United States may receive Federal aid as a result of damages from a major disaster or emergency.</td>
</tr>
<tr>
<td>Department of Homeland Security (DHS)</td>
<td>A cabinet-level department established in 2002 by merging 22 separate agencies into a cohesive department with a primary mission of protecting the homeland.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>----------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Earthquake</td>
<td>A sudden motion or trembling caused by a release of strain accumulated within or along the edge of the earth’s tectonic plates.</td>
</tr>
<tr>
<td>Elevation of structures</td>
<td>Raising structures above the base flood elevation to protect structures located in areas prone to flooding.</td>
</tr>
<tr>
<td>Emergency</td>
<td>Any incident, whether natural or manmade, that requires responsive action to protect life or property. Under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, an emergency means any occasion or instance for which, in the determination of the President, Federal assistance is needed to supplement State and local efforts and capabilities to save lives and to protect property and public health and safety, or to lessen or avert the threat of a catastrophe in any part of the United States.</td>
</tr>
<tr>
<td>Emergency Management Assistance Compact (EMAC)</td>
<td>A congressionally ratified organization that provides form and structure to interstate mutual aid. Through EMAC, a disaster-affected State can request and receive assistance from other member States quickly and efficiently, resolving two key issues up front: liability and reimbursement.</td>
</tr>
<tr>
<td>Emergency Management/Response Personnel</td>
<td>Includes Federal, State, territorial, tribal, substate regional, and local governments, NGOs, private sector-organizations, critical infrastructure owners and operators, and all other organizations and individuals who assume an emergency management role. (Also known as emergency responder.)</td>
</tr>
<tr>
<td>Emergency Operations Center (EOC)</td>
<td>The physical location at which the coordination of information and resources to support incident management (on-scene operations) activities normally takes place. An EOC may be a temporary facility or may be located in a more central or permanently established facility, perhaps at a higher level of organization within a jurisdiction. EOCs may be organized by major functional disciplines (e.g., fire, law enforcement, medical services), by jurisdiction (e.g., Federal, State, regional, tribal, city, county), or by some combination thereof.</td>
</tr>
<tr>
<td>Emergency Operations Plan</td>
<td>An ongoing plan for responding to a wide variety of potential hazards.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>---------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Existing Construction</strong></td>
<td>As used in reference to the NFIP, any structure already existing or on which construction or substantial improvement was started prior to the effective date of a community's floodplain management regulations.</td>
</tr>
<tr>
<td><strong>Federal Emergency Management Agency (FEMA)</strong></td>
<td>The lead federal agency with responsibility for responding to Presidential emergencies and major disasters. FEMA was created in 1979 to provide a single point of accountability for all federal activities related to disaster mitigation and emergency preparedness, response, and recovery. FEMA is part of the Department of Homeland Security.</td>
</tr>
<tr>
<td><strong>Flood Hazard Area</strong></td>
<td>The area on a map shown to be inundated by a flood of a given magnitude.</td>
</tr>
<tr>
<td><strong>Flood Insurance Rate Map (FIRM)</strong></td>
<td>Map of a community, prepared by FEMA, which shows both the special flood hazard areas and the risk premium zones applicable to the community under the National Flood insurance Program.</td>
</tr>
<tr>
<td><strong>Flood Mitigation Assistance (FMA) Program</strong></td>
<td>A program created as part of the National Flood Insurance Reform Act of 1994. FMA provides funding to assist communities and states in implementing actions that reduce or eliminate the long-term risk of flood damage to buildings, manufactured homes, and other NFIP insurable structures, with a focus on repetitive loss properties.</td>
</tr>
<tr>
<td><strong>Floodplain</strong></td>
<td>Any land area, including watercourse, susceptible to partial or complete inundation by water from any source.</td>
</tr>
<tr>
<td><strong>Flood-proofing</strong></td>
<td>Actions that prevent or minimize future flood damage. Making the areas below the anticipated flood level watertight or intentionally allowing flood-waters to enter the interior to equalize flood pressures are examples of flood-proofing.</td>
</tr>
<tr>
<td><strong>Flood Zone</strong></td>
<td>A geographical area shown on a Flood Insurance Rate Map (FIRM) that reflects the severity or type of flooding in the area.</td>
</tr>
<tr>
<td><strong>Goals</strong></td>
<td>General guidelines that explain what you want to achieve. They are usually broad policy-type statements, long term in nature, and represent global visions.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>----------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Hazard</strong></td>
<td>Something that is potentially dangerous or harmful, often the root cause of an unwanted outcome.</td>
</tr>
<tr>
<td><strong>Hazard event</strong></td>
<td>A specific occurrence of a particular type of hazard.</td>
</tr>
<tr>
<td><strong>Hazard identification</strong></td>
<td>The process of identifying hazards that threaten an area.</td>
</tr>
<tr>
<td><strong>Hazard information center</strong></td>
<td>Information booth, publication kiosk, exhibit, etc. that displays information to educate the public about hazards that affect the jurisdiction and hazard mitigation activities people can undertake.</td>
</tr>
<tr>
<td><strong>Hazard mitigation</strong></td>
<td>Sustained actions taken to reduce or eliminate long-term risk from hazards and their effects.</td>
</tr>
<tr>
<td><strong>Hazard Mitigation Grant Program (HMGP)</strong></td>
<td>Authorized under Section 404 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, HMGP is administered by FEMA and provides grants to states, tribes, and local governments to implement hazard mitigation actions after a major disaster declaration. The purpose of the program is to reduce the loss of life and property due to disasters and to enable mitigation activities to be implemented as a community recovers from a disaster.</td>
</tr>
<tr>
<td><strong>Hazard profile</strong></td>
<td>A description of the physical characteristics of hazards and a determination of various descriptors, including magnitude, duration, frequency, probability, and extent. In most cases, a community can most easily use these descriptors when they are recorded and displayed as maps.</td>
</tr>
<tr>
<td><strong>Hazus</strong></td>
<td>A GIS-based, nationally standardized, loss estimation tool developed by FEMA. Hazus includes earth-quake, wind, hurricane, and flood loss estimate components.</td>
</tr>
<tr>
<td><strong>Hurricane</strong></td>
<td>An intense tropical cyclone, formed in the atmosphere over warm ocean areas, in which wind speeds reach 74 miles per hour or more and blow in a large spiral around a relatively calm center or “eye.” Hurricanes develop over the north Atlantic Ocean, northeast Pacific Ocean, or the south Pacific Ocean east of 160ºE longitude. Hurricane circulation is counter-clockwise in the northern hemisphere and clockwise in the southern hemisphere.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>--------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Incident</td>
<td>An occurrence, natural or manmade, that requires a response to protect life or property. Incidents can, for example, include major disasters, emergencies, terrorist attacks, terrorist threats, civil unrest, wildland and urban fires, floods, hazardous materials spills, nuclear accidents, aircraft accidents, earthquakes, hurricanes, tornadoes, tropical storms, tsunamis, war-related disasters, public health and medical emergencies, and other occurrences requiring an emergency response.</td>
</tr>
<tr>
<td>Infrastructure</td>
<td>Refers to the public facilities of a community that have a direct impact on the quality of life. Infrastructure includes communication technology, such as phone lines or Internet access; vital services, such as public water supplies and sewer treatment facilities; and an area’s transportation system: airports, heliports, highways, bridges, tunnels, roadbeds, overpasses, railways, bridges, rail yards, depots; and waterways, canals, locks, seaports, ferries, harbors, drydocks, piers, and regional dams.</td>
</tr>
<tr>
<td>Interoperability</td>
<td>Ability of systems, personnel, and equipment to provide and receive functionality, data, information and/or services to and from other systems, personnel, and equipment, between both public and private agencies, departments, and other organizations, in a manner enabling them to operate effectively together. Allows emergency management/response personnel and their affiliated organizations to communicate within and across agencies and jurisdictions via voice, data, or video-on-demand, in real time, when needed, and when authorized.</td>
</tr>
<tr>
<td>Jurisdiction</td>
<td>A range or sphere of authority. Public agencies have jurisdiction at an incident related to their legal responsibilities and authority. Jurisdictional authority at an incident can be political or geographical (e.g., Federal, State, tribal, local boundary lines) or functional (e.g., law enforcement, public health).</td>
</tr>
<tr>
<td>Landslide</td>
<td>Downward movement of a slope and materials under the force of gravity.</td>
</tr>
<tr>
<td>Loss estimation</td>
<td>Forecasts of human and economic impacts and property damage from future hazard events, based on current scientific and engineering knowledge.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Major Disaster</td>
<td>Any hurricane, tornado, storm, flood, high water, wind-driven water, tidal wave, tsunami, earthquake, volcanic eruption, landslide, mudslide, snowstorm, drought, fire, explosion, or other catastrophe in any part of the United States that, in the determination of the President, causes damage of sufficient severity and magnitude to warrant major disaster assistance under the Stafford Act, above and beyond emergency services by the Federal Government, to supplement the efforts and available resources of States, local governments, and disaster relief organizations in alleviating the damage, loss, hardship, or suffering caused thereby defined under Public Law 93-288.</td>
</tr>
<tr>
<td>Memorandum of Agreement (MOA)</td>
<td>A non-binding statement that defines the duties, responsibilities, and commitment of the different parties or individuals; provides a clear statement of values, principles, and goals; and establishes an organizational structure to assist in measuring and evaluating progress.</td>
</tr>
<tr>
<td>Mitigate</td>
<td>To cause something to become less harsh or hostile; to make less severe or painful.</td>
</tr>
<tr>
<td>Mitigation</td>
<td>Activities providing a critical foundation in the effort to reduce the loss of life and property from natural and/or manmade disasters by avoiding or lessening the impact of a disaster and providing value to the public by creating safer communities. Mitigation seeks to fix the cycle of disaster damage, reconstruction, and repeated damage. These activities or actions, in most cases, will have a long-term sustained effect.</td>
</tr>
<tr>
<td>Mitigation actions</td>
<td>Activities or projects that help achieve the goals and objectives of a mitigation plan (also known as mitigation measures).</td>
</tr>
<tr>
<td>Mitigation plan</td>
<td>The document that articulates results from the systematic process of identifying hazards and evaluating vulnerability, identifying goals, objectives, and actions to reduce or eliminate the effects of identified hazards, and an implementation plan for carrying out the actions.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>----------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Mutual Aid Agreement or Assistance Agreement</td>
<td>Written or oral agreement between and among agencies/organizations and/or jurisdictions that provides a mechanism to quickly obtain emergency assistance in the form of personnel, equipment, materials, and other associated services. The primary objective is to facilitate rapid, short-term deployment of emergency support prior to, during, and/or after an incident.</td>
</tr>
<tr>
<td>National Flood Insurance Program (NFIP)</td>
<td>Federal program created by Congress in 1968 that makes flood insurance available in communities that enact minimum floodplain management regulations found in 44 CFR §60.3. The ordinance regulates new and substantially damaged or improved development in identified flood hazard areas.</td>
</tr>
<tr>
<td>National Incident Management System (NIMS)</td>
<td>A set of principles that provides a systematic, proactive approach guiding government agencies at all levels, nongovernmental organizations, and the private sector to work seamlessly to prevent, protect against, respond to, recover from, and mitigate the effects of incidents, regardless of cause, size, location, or complexity, in order to reduce the loss of life or property and harm to the environment.</td>
</tr>
<tr>
<td>National Response Framework (NRF)</td>
<td>A guide to how the Nation conducts all-hazards response.</td>
</tr>
<tr>
<td>Objectives</td>
<td>Objectives define strategies or implementation steps to attain the identified goals. Unlike goals, objectives are specific and measurable.</td>
</tr>
<tr>
<td>Open space preservation</td>
<td>Preserving undeveloped areas from development through any number of methods, including low-density zoning, open space zoning, easements, or public or private acquisition. Open space preservation is a technique that can be used to prevent flood damage in flood-prone areas, land failures on steep slopes or liquefaction-prone soils, and can enhance the natural and beneficial functions of floodplains.</td>
</tr>
<tr>
<td>Ordinance</td>
<td>A term for a law or regulation adopted by a local government.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Planning</td>
<td>The act or process of making or carrying out plans; the establishment of goals, policies, and procedures for a social or economic unit.</td>
</tr>
<tr>
<td>Policy</td>
<td>A course of action or specific rule of conduct to be followed in achieving goals and objectives.</td>
</tr>
<tr>
<td>Post-disaster mitigation</td>
<td>Mitigation actions taken after a disaster has occurred, usually during recovery and reconstruction.</td>
</tr>
<tr>
<td>Post-disaster recovery ordinance</td>
<td>An ordinance authorizing certain governmental actions to be taken during the immediate aftermath of a hazard event to expedite implementation of recovery and reconstruction actions identified in a pre-event plan.</td>
</tr>
<tr>
<td>Post-disaster recovery planning</td>
<td>The process of planning those steps the jurisdiction will take to implement long-term reconstruction with a primary goal of mitigating its exposure to future hazards. The post-disaster recovery planning process can also involve coordination with other types of plans and agencies, but it is distinct from planning for emergency operations.</td>
</tr>
<tr>
<td>Pre-Disaster Mitigation (PDM)</td>
<td>Created by the Disaster Mitigation Act of 2000 (DMA 2000), PDM includes competitive grants for hazard mitigation planning and projects.</td>
</tr>
<tr>
<td>Preparedness</td>
<td>A continuous cycle of planning, organizing, training, equipping, exercising, evaluating, and taking corrective action in an effort to ensure effective coordination during incident response. Within the National Incident Management System, preparedness focuses on the following elements: planning; procedures and protocols; training and exercises; personnel qualification and certification; and equipment certification.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Prevention</td>
<td>Actions to avoid an incident or to intervene to stop an incident from occurring. Prevention involves actions to protect lives and property. It involves applying intelligence and other information to a range of activities that may include such countermeasures as deterrence operations; heightened inspections; improved surveillance and security operations; investigations to determine the full nature and source of the threat; public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and, as appropriate, specific law enforcement operations aimed at deterring, preempting, interdicting, or disrupting illegal activity and apprehending potential perpetrators and bringing them to justice.</td>
</tr>
<tr>
<td>Probability</td>
<td>A statistical measure of the likelihood that a hazard event will occur.</td>
</tr>
<tr>
<td>Public education and outreach programs</td>
<td>Any campaign to make the public more aware of hazard mitigation and mitigation programs, including hazard information centers, mailings, public meetings, etc.</td>
</tr>
<tr>
<td>Recovery</td>
<td>The development, coordination, and execution of service- and site-restoration plans; the reconstitution of government operations and services; individual, private-sector, nongovernmental, and public assistance programs to provide housing and to promote restoration; long-term care and treatment of affected persons; additional measures for social, political, environmental, and economic restoration; evaluation of the incident to identify lessons learned; postincident reporting; and development of initiatives to mitigate the effects of future incidents.</td>
</tr>
<tr>
<td>Regulation</td>
<td>Most states have granted local jurisdictions broad regulatory powers to enable the enactment and enforcement of ordinances that deal with public health, safety, and welfare. These include building codes, building inspections, zoning, floodplain and subdivision ordinances, and growth management initiatives.</td>
</tr>
<tr>
<td>Regulatory power</td>
<td>Local jurisdictions have the authority to regulate certain activities in their jurisdiction. With respect to mitigation planning, the focus is on such things as regulating land use development and construction through zoning.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Mitigation</td>
<td>Mitigation for Emergency Managers</td>
</tr>
<tr>
<td>Relocation out of hazard areas</td>
<td>A mitigation technique that features the process of demolishing or moving a building to a new location outside the hazard area.</td>
</tr>
<tr>
<td>Resources</td>
<td>Resources include the people, materials, technologies, money, etc., required to implement strategies or processes. The costs of these resources are often included in a budget.</td>
</tr>
<tr>
<td>Response</td>
<td>Activities that address the short-term, direct effects of an incident. Response includes immediate actions to save lives, protect property, and meet basic human needs. Response also includes the execution of emergency operations plans and of mitigation activities designed to limit the loss of life, personal injury, property damage, and other unfavorable outcomes. As indicated by the situation, response activities include applying intelligence and other information to lessen the effects or consequences of an incident; increased security operations; continuing investigations into nature and source of the threat; ongoing public health and agricultural surveillance and testing processes; immunizations, isolation, or quarantine; and specific law enforcement operations aimed at preemting, interdicting, or disrupting illegal activity, and apprehending actual perpetrators and bringing them to justice.</td>
</tr>
<tr>
<td>Resolutions</td>
<td>Expressions of a governing body's opinion, will, or intention that can be executive or administrative in nature. Most planning documents must undergo a council resolution, which must be supported in an official vote by a majority of representatives to be adopted. Other methods of making a statement or announcement about a particular issue or topic include proclamations and declarations.</td>
</tr>
<tr>
<td>Risk</td>
<td>The estimated impact that a hazard would have on people, services, facilities, and structures in a community; the likelihood of a hazard event resulting in an adverse condition that causes injury or damage. Risk is often expressed in relative terms such as a high, moderate, or low likelihood of sustaining damage above a particular threshold due to a specific type of hazard event. It also</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>------</td>
<td>------------</td>
</tr>
<tr>
<td>can be expressed in terms of potential monetary losses associated with the intensity of the hazard.</td>
<td></td>
</tr>
<tr>
<td><strong>Section 404 of the Stafford Act</strong></td>
<td>Authorizes the Hazard Mitigation Grant Program, which provides funding for cost-effective hazard mitigation measures.</td>
</tr>
<tr>
<td><strong>Section 409 Hazard Mitigation Plan</strong></td>
<td>Requires the identification and evaluation of mitigation opportunities, and that all repairs be made to applicable codes and standards, as a condition for receiving Federal disaster assistance. Enacted to encourage identification and mitigation of hazards at all levels of government.</td>
</tr>
<tr>
<td><strong>Severe Repetitive Loss Program</strong></td>
<td>The Severe Repetitive Loss (SRL) grant program was authorized by the Bunning-Bereuter-Blumenauer Flood Insurance Reform Act of 2004, which amended the National Flood Insurance Act of 1968 to provide funding to reduce or eliminate the long-term risk of flood damage to severe repetitive loss (SRL) structures insured under the National Flood Insurance Program (NFIP).</td>
</tr>
<tr>
<td><strong>Stafford Act</strong></td>
<td>The Robert T. Stafford Disaster Relief and Emergency Assistance Act, PL100-107 was signed into law November 23, 1988 and amended the Disaster Relief Act of 1974, PL 93-288. The Stafford Act is the statutory authority for most federal disaster response activities, especially as they pertain to FEMA and its programs.</td>
</tr>
<tr>
<td><strong>Stakeholder</strong></td>
<td>Stakeholders are individuals or groups, including businesses, private organizations, and citizens, that will be affected in any way by an action or policy.</td>
</tr>
<tr>
<td><strong>STAPLE(E)</strong></td>
<td>An acronym for the criteria that can be used by a community in selecting an appropriate mitigation strategy: Social, Technical, Administrative, Political, Legal, and Economic/Environmental.</td>
</tr>
<tr>
<td><strong>State Hazard Mitigation Officer (SHMO)</strong></td>
<td>The state government representative who is the primary point of contact with FEMA, other state and federal agencies, and local units of government in the planning and implementation of pre- and post-disaster mitigation activities.</td>
</tr>
<tr>
<td><strong>Strategy</strong></td>
<td>The general plan or direction selected to accomplish incident objectives.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Structural retrofitting</td>
<td>Modifying existing buildings and infrastructure to protect them from hazards.</td>
</tr>
<tr>
<td>Subdivision</td>
<td>The division of a tract of land into two or more lots for sale or development.</td>
</tr>
<tr>
<td>Subdivision and development regulations</td>
<td>Regulations and standards governing the division of land for development or sale. Subdivision regulations can control the configuration of parcels, set standards for developer-built infrastructure, and set standards for minimizing runoff, impervious surfaces, and sediment during development. They can be used to minimize exposure of buildings and infrastructure to hazards.</td>
</tr>
<tr>
<td>Tornado</td>
<td>A violently rotating column of air extending from a thunderstorm to the ground.</td>
</tr>
<tr>
<td>Vulnerability</td>
<td>Describes how exposed or susceptible an asset is to damage. Vulnerability depends on an asset’s construction, contents, and the economic value of its functions. Like indirect damages, the vulnerability of one element of the community is often related to the vulnerability of another. For example, many businesses depend on uninterrupted electrical power—if an electric substation is flooded, it not only affects the substation but a number of businesses as well. Often, indirect effects can be much more widespread and damaging than direct ones.</td>
</tr>
<tr>
<td>Vulnerability assessment</td>
<td>The extent of injury and damage that may result from a hazard event of a given intensity in a given area. The vulnerability assessment should address the effects of hazard events on the existing and future built environment.</td>
</tr>
<tr>
<td>Wildfire</td>
<td>An uncontrolled fire spreading through vegetative fuels, exposing and possibly consuming structures.</td>
</tr>
<tr>
<td>Zoning</td>
<td>The division of land within a local jurisdiction by local legislative regulation into zones of allowable types and intensities of land uses.</td>
</tr>
<tr>
<td>Zoning ordinance</td>
<td>Designation of allowable land use and intensities for a local jurisdiction. Zoning ordinances consist of two components: a zoning text and a zoning map.</td>
</tr>
</tbody>
</table>
APPENDIX B: ACTION ITEM LIST

How to use the action item list:

Throughout the course, as ideas come to you about improving your community’s mitigation efforts, write them on this Action Item List.

At the end of the workshop, circle three items on your action item list that you will commit to doing in the following week. After three weeks of continuing to implement these new ideas, choose three more items on the list to put into practice, and so on, until all the items are completed and new habits are formed.

Following these suggestions is a good way to ensure that the ideas from the course will get implemented. If you try to do everything at once, you will quickly become overwhelmed.

APPENDIX C: CAPABILITIES ASSESSMENT WORKSHEET

Jurisdiction: _________________________________________________

Local mitigation capabilities are existing authorities, policies, programs, and resources that reduce hazard impacts or that could be used to implement hazard mitigation activities. Please complete the tables and questions in the worksheet as completely as possible. Complete one worksheet for each jurisdiction.

Planning and Regulatory

Planning and regulatory capabilities are the plans, policies, codes, and ordinances that prevent and reduce the impacts of hazards. Please indicate which of the following your jurisdiction has in place.

<table>
<thead>
<tr>
<th>Plans</th>
<th>Yes/No</th>
<th>Does the plan address hazards?</th>
<th>Does the plan identify projects to include in the mitigation strategy?</th>
<th>Can the plan be used to implement mitigation actions?</th>
</tr>
</thead>
<tbody>

**How can these capabilities be expanded and improved to reduce risk?**
## APPENDIX D: TECHNICAL AND FINANCIAL MITIGATION RESOURCES

### Local Resources

- Donation (land and/or money)
- Public/private land swap
- Volunteer organizations
  - American Red Cross
  - Salvation Army
  - Habitat for Humanity
  - Mennonite Disaster Service
  - Lions, Elks, and VFW
- Community Colleges
- Renewable resources such as a surcharge on a utility bill
- Tax credits
- Planning group
- Environmental groups
- Local grants department
- Building code officials
- Zoning officials/community development agency
- Water & sewer authority
- Technical (GIS, etc.)
- Other community interests groups
- Road/bridge
- Public works/utilities
  - Local airports

### Other
### Private Sector Resources

- Private land swap
- Private-public partnerships
- Private engineering firms
- Corporate funding
- Architects and engineers
- Developers
- Colleges & Universities
- Private or foundation funding
- Insurance programs
- Professional associations
  - Association of State Floodplain Managers
  - American Institute of Architects
  - American Planning Association
  - American Society of Civil Engineers
  - Association of Contingency Planners
  - Association of State Dam Safety Officials
  - Building Seismic Safety Council

### Other
### State Resources

- Universities and research institutes
- Coastal zone management office
- Emergency management agency and/or State Hazard Mitigation Officer
- State historic preservation office
- Flood hazard management office
- Dam safety office
- Natural resources office
- Environmental protection office
- Housing and community development office
- Public safety office
- Building regulations and standards office
- Transportation and construction office
- Highway department
- State fire marshal
- Geological survey offices

**Other**
## Federal Resources

<table>
<thead>
<tr>
<th>Program</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>National Flood Insurance Program</strong></td>
<td>Provides the availability of flood insurance in exchange for the adoption and enforcement of a minimum local floodplain management ordinance that regulates new and substantially damaged or improved development in identified flood areas.</td>
</tr>
<tr>
<td></td>
<td>Contact your State NFIP coordinator or FEMA Regional Office for more information.</td>
</tr>
<tr>
<td><strong>Community Rating System (CRS)</strong></td>
<td>The Community Rating System (CRS) provides incentive for communities to do more than just regulate construction of new buildings to minimum NFIP standards. Under the CRS, flood insurance premiums are reduced when enrolled communities:</td>
</tr>
<tr>
<td></td>
<td>- Reduce flood damages to existing buildings.</td>
</tr>
<tr>
<td></td>
<td>- Manage development in areas not mapped by the NFIP.</td>
</tr>
<tr>
<td></td>
<td>- Protect new buildings beyond the minimum NFIP protection level.</td>
</tr>
<tr>
<td></td>
<td>- Help people obtain flood insurance.</td>
</tr>
<tr>
<td></td>
<td>Contact your State NFIP coordinator or FEMA Regional Office for more information.</td>
</tr>
<tr>
<td><strong>Community Assistance Program – State Support Services Element (CAP-SSE)</strong></td>
<td>The Community Assistance Program provides funding to states to provide technical assistance to communities in the National Flood Insurance Program (NFIP) and to evaluate community performance in implementing NFIP floodplain management activities.</td>
</tr>
<tr>
<td></td>
<td>Contact the CAP-SSE program Manager at the State emergency management agency or the FEMA Regional office for more information.</td>
</tr>
<tr>
<td><strong>Hazard Mitigation Assistance (HMA)</strong></td>
<td>FEMA’s Hazard Mitigation Assistance (HMA) grant programs (shown below) provide funding for eligible mitigation activities that reduce disaster losses and protect life and property from future disaster damages.</td>
</tr>
<tr>
<td><strong>Hazard Mitigation Grant Program (HMGP)</strong></td>
<td>Authorized under Section 404 of the Stafford Act, the Hazard Mitigation Grant Program (HMGP) provides grants to States and local governments to implement long-term hazard mitigation measures after a major disaster declaration. The purpose of the HMGP is to reduce the loss of life and property due to natural disasters and to enable mitigation measures to be implemented during the immediate recovery from a disaster.</td>
</tr>
<tr>
<td><strong>Federal Resources</strong></td>
<td></td>
</tr>
<tr>
<td>-------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Pre-Disaster Mitigation (PDM)</td>
<td>The Pre-Disaster Mitigation (PDM) program provides funds to states, territories, Indian tribal governments, communities, and universities for hazard mitigation planning and the implementation of mitigation projects prior to a disaster event.</td>
</tr>
<tr>
<td>Flood Mitigation Assistance (FMA)</td>
<td>The Flood Mitigation Assistance (FMA) program was created as part of the National Flood Insurance Reform Act (NFIRA) of 1994 (42 U.S.C. 4101) with the goal of reducing or eliminating claims under the National Flood Insurance Program (NFIP).</td>
</tr>
<tr>
<td>Repetitive Flood Claims (RFC)</td>
<td>The Repetitive Flood Claims (RFC) grant program was authorized by the Bunning-Bereuter-Blumenauer Flood Insurance Reform Act of 2004 (P.L. 108–264), which amended the National Flood Insurance Act (NFIA) of 1968 (42 U.S.C. 4001, et al). Up to $10 million is available annually for FEMA to provide RFC funds to assist States and communities reduce flood damages to insured properties that have had one or more claims to the NFIP.</td>
</tr>
<tr>
<td>Severe Repetitive Loss (SRL)</td>
<td>The Severe Repetitive Loss (SRL) grant program was authorized by the Bunning-Bereuter-Blumenauer Flood Insurance Reform Act of 2004, which amended the National Flood Insurance Act of 1968 to provide funding to reduce or eliminate the long-term risk of flood damage to severe repetitive loss (SRL) structures insured under the NFIP.</td>
</tr>
<tr>
<td>National Earthquake Hazards Reduction Program (NEHRP)</td>
<td>The National Earthquake Hazards Reduction Program (NEHRP) is intended to mitigate earthquake losses through:</td>
</tr>
<tr>
<td></td>
<td>• Development and implementation of seismic design and construction standards and techniques</td>
</tr>
<tr>
<td></td>
<td>• Technical assistance materials</td>
</tr>
<tr>
<td></td>
<td>• Education and risk reduction programs</td>
</tr>
<tr>
<td></td>
<td>• Centers addressing specific aspects of the earthquake problem</td>
</tr>
<tr>
<td></td>
<td>• Dissemination of earthquake information</td>
</tr>
<tr>
<td></td>
<td>Contact the Earthquake Program Manager at the State Emergency Management Agency or your FEMA Regional Office for more information.</td>
</tr>
</tbody>
</table>
### Federal Resources

<table>
<thead>
<tr>
<th>Program</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Dam Safety Program</strong></td>
<td>More than 95 percent of nation’s dams are non-Federal and the responsibility of the State or private owners. The objectives of this program include:</td>
</tr>
</tbody>
</table>
|                                              |  - Establishing effective dam safety programs in every state  
  - Developing public awareness programs  
  - Producing needed technical assistance materials |
|                                              | Contact the Dam Safety Program Manager at the State Emergency Management Agency or your FEMA Regional Office for more information. |
| **Emergency Management Performance Grant (EMPG) Program** | The Emergency Management Performance Grant (EMPG) Program provides resources to assist State and local governments to sustain and enhance all-hazards emergency management capabilities. States have the opportunity to use EMPG funds to further strengthen their ability to support emergency management activities while simultaneously addressing issues of national concern as identified in the National Priorities of the National Preparedness Guidelines. EMPG has a 50 percent Federal and 50 percent State cost-share cash or in-kind match requirement. |
| **Public Assistance (PA) Program**           | Authorized under Section 406 of the Stafford Act, the Public Assistance (PA) Program funds hazard mitigation projects after a presidential disaster declaration. Application of these 406 funds is limited to public facilities damaged within a federally declared disaster area. Repairs may be upgraded to incorporate hazard mitigation measures, if these are cost-effective or required by building codes. Such improvements can be identified by FEMA, the state, or the local applicant. The PA Program can be used for structural measures only and does not apply to buyouts. |
## Federal Resources

<table>
<thead>
<tr>
<th><strong>U.S. Army Corps of Engineers (USACE) Flood Plain Management Services (FPMS) Program</strong></th>
<th>Authorized under Section 206 of the Flood Control Act of 1960 (as amended), the Flood Plain Management Services (FPMS) Program encourages prudent use of the nation’s flood plains for the benefit of the national economy and general welfare by supporting comprehensive flood plain management planning at all appropriate governmental levels. USACE provides flood plain information and technical assistance to state, regional, and local governments, Native American tribes, and other non-federal public agencies without charge. Contract your District Engineer for more information.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>National Weather Service (NWS)</strong></td>
<td>Prepares and issues flood, severe weather, and coastal storm warnings. Can provide technical assistance in preparing weather and flood warning plans. Contact your regional NWS office or center for more information.</td>
</tr>
<tr>
<td><strong>Economic Development Administration (EDA)</strong></td>
<td>EDA is an agency within the U.S. Department of Commerce that partners with distressed communities throughout the United States to foster job creation, collaboration and innovation. EDA provides communities with technical assistance for economic development planning. Contact your regional Department of Commerce office for more information.</td>
</tr>
<tr>
<td><strong>Community Development Block Grants (CDBG)</strong></td>
<td>Sponsored by the Department of Housing and Urban Development (HUD), the objective of the Community Development Block Grant (CDBG) is to develop viable urban communities by providing decent housing and a suitable living environment and by expanding economic opportunities, principally for low to moderate-income people. Disaster-related assistance is eligible under this program; mitigation activities have been funded. Contact your HUD field office for more information.</td>
</tr>
<tr>
<td><strong>HOME Investment Partnerships Program</strong></td>
<td>Sponsored by HUD, HOME provides formula grants to States and localities that communities use – often in partnership with local nonprofit groups – to fund a wide range of activities that build, buy, and/or rehabilitate affordable housing for rent or homeownership or provide direct rental assistance to low-income people. Contact your HUD field office for more information.</td>
</tr>
<tr>
<td>Federal Resources</td>
<td>The Small Business Administration (SBA) provides low interest disaster loans to homeowners, renters, businesses of all sizes and private, non-profit organizations to repair or replace real estate, personal property, machinery &amp; equipment, inventory and business assets that have been damaged or destroyed in a declared disaster.</td>
</tr>
<tr>
