NOTE:

FEMA EMI has provided these resources to provide information that may be of interest to individuals working to develop local damage assessment programs.

EMI does not guarantee that external websites and non-government documents linked in this Toolkit comply with the accessibility requirements of Section 508 of the Rehabilitation Act.

This Toolkit may contain URLs that were valid when originally published, but now link to sites or pages that no longer exist.
Resources

While not an all-inclusive list, the following websites will help when developing your local damage assessment processes and procedures.

Lesson 1: Introduction to Local Damage Assessment

• Hazard Magnitude Scales
  o Enhanced Fujita Scale
    http://www.spc.noaa.gov/efscale/
  o Saffir-Simpson Hurricane Wind Scale
    http://www.nhc.noaa.gov/sshws.shtml
  o Richter Scale
    http://earthquake.usgs.gov/learn/topics/richter.php
  o Modified Mercalli Intensity Scale
    http://earthquake.usgs.gov/learn/topics/mag_vs_int.php
  o Beaufort Wind Force Scale
    http://www.spc.noaa.gov/faq/tornado/beaufort.html

• National Response Framework (NRF) Critical Infrastructure and Key Resources (CIKR) Support Annex

• National Response Framework (NRF) Resource Center
  http://www.fema.gov/emergency/nrf/index.htm

• National Incident Management System (NIMS) Resource Center
  http://www.fema.gov/emergency/nims/

• National Infrastructure Protection Plan (NIPP)

Lesson 2: Hazard Analysis

• FEMA Library (Publication 386-2)
  http://www.fema.gov/library/viewRecord.do?id=1880

• The Superfund Amendments and Reauthorization Act (SARA), Title III
  http://www.fema.gov/government/grant/sara.shtm

• HAZUS-MH
  http://www.fema.gov/plan/prevent/hazus/

• Geographic Information Systems (GIS)
  http://www.gismaps.fema.gov/gis01.shtm
Lesson 3: Planning the Damage Assessment Program

- Sample Damage Assessment Forms
  - Oklahoma Department of Emergency Management, Damage Assessment Forms
  - State of Idaho Damage Assessment Handbook

Lesson 4: Training and Exercises

- Training available from FEMA’s Emergency Management Institute (EMI)
  http://training.fema.gov/
  - IS-100.b Introduction to the Incident Command System
  - IS-120.a An Introduction to Exercises
  - IS-130 Exercise Evaluation and Improvement Planning
  - IS-120a, An Introduction to Exercises
  - IS-139, Exercise Design
  - L-146, HSEEP Training Course
  - IS-200.b ICS for Single Resources and Initial Action Incidents
  - E-202, Debris Management
  - IS-700.a National Incident Management System (NIMS), An Introduction
  - IS-800.b National Response Framework, An Introduction
  - Master Exercise Practitioner Program (MEPP)
  - Lessons Learned Information Sharing (LLIS) site
- Other training opportunities
  - National Infrastructure Protection Plan (NIPP)
    http://www.training.fema.gov/EMIWeb/IS/is860a.asp
  - Critical Infrastructure and Key Resources (CIKR) Support Annex
    http://www.training.fema.gov/EMIWeb/IS/IS821.asp
  - CIKR Asset Protection Technical Assistance Program (CAPTAP)
    http://www.dhs.gov/files/programs/gc_1195679577314.shtm
  - FEMA’s Lessons Learned Information Sharing (LLIS) site
    http://llis.gov/
Lesson 5: Operations

- U.S. Army Corps of Engineers (debris calculations)
  http://www.usace.army.mil/
- HAZUS-MH
  http://www.fema.gov/plan/prevent/hazus/
- Geographic Information Systems (GIS)
  http://www.gismaps.fema.gov/gis01.shtm

- Sample Damage Assessment Forms
  - Oklahoma Department of Emergency Management, Damage Assessment Forms
  - State of Idaho Damage Assessment Handbook

Lesson 6: Data Collection and Analysis

- Damage Assessment after the Paso Robles (San Simeon, California) Earthquake: Lessons for Emergency Management
  http://www.colorado.edu/hazards/research/gr/gr166/gr166.pdf
Sample Hazard Analysis Forms

This section contains the following sample forms and documents:

- Hazard Vulnerability Matrix
- Hazard Vulnerability Assessment Spreadsheet
- Risk Index Worksheet for Comparing and Prioritizing Risks
- Hazard Profile Worksheet
- Community Exposure Profile
- Loss Estimation Form

These forms and documents are in addition to the ones referenced in the Resource Links section of this lesson. They can be adapted to fit the needs of your community for inclusion in your community’s damage assessment plan.
## Hazard Vulnerability Matrix

<table>
<thead>
<tr>
<th>Hazard</th>
<th>Probability</th>
<th>Impact</th>
<th>Frequency</th>
<th>Distribution</th>
</tr>
</thead>
<tbody>
<tr>
<td>List specific hazards which could occur in your community. Include natural hazards as well as adversarial or human-caused hazards.</td>
<td>High Moderate Low None</td>
<td>Major Minor None</td>
<td>50 years 10 years 5-10 years 2-3 years every year several times per year</td>
<td>Regional County-wide Localized N/A</td>
</tr>
</tbody>
</table>
### Hazard Vulnerability Matrix – Completed Example

* Hazards of Concern as per HVA

Adapted from Manatee County Florida’s Hazard Vulnerability Analysis
Instructions for Using the Spreadsheet

The All Hands COOP Risk Assessment tool is an Excel spreadsheet, which is designed to measure a facility’s risk from the effects of various hazards. The tool is based on a formula that weighs the probability and severity of potential impacts against preparations in place which are intended to minimize these impacts. Using a simple 1 to 5 scale, the probability of occurrence and the impact potential are tabulated along with mitigation efforts and the resources available to respond to the hazard. The score is based on a formula that weighs risk heavily but provides credit for mitigation and response and recovery resources. The higher the score, the higher the facility’s risk from the hazard.

Instructions:
1. Obtain and review a copy of the county’s Hazard Vulnerability Analysis (HVA.)
2. Add or delete hazards as required based on your local HVA analysis.
3. Using the guidelines shown below, score each hazard in all columns based on a scale of 1 to 5 with 5 being the highest.
4. Final Step: Sort the Total Column in descending order once scoring is completed.

Scoring Guidelines:
There are eight risk assessment factors contained in the spreadsheet. All factor scoring is done on a scale of 1-5. The formula contained in the spreadsheet calculates higher scores in the occurrence and impact columns as increasing risks, while higher scores in the mitigation and resource categories lower the overall risk score giving credit for steps taken to reduce the likely impact. Base your scoring on a “worst-case scenario.” The following guidelines will assist you in scoring each hazard.

Historical Occurrence (Frequency):
Based on the number of occurrences: At least one occurrence every 1-4 years = 5; At least one occurrence every 5-10 years = 4; At least one occurrence every 11-50 years = 3; At least one occurrence every 51-100 years = 2; Has not occurred, but for planning purposes should be evaluated = 1.

Probability of Occurrence:
Based on the statistical probability of the hazard occurring in a given year. This may be obtained by scientific research or may simply be an educated guess. The higher the probability, the higher the score. Use the following guideline in determining you score. If less than 5% score 1, if 5% to 10% score 2, if 10% to 20% score 3, if 20% to 40% score 4, and score 5 if greater than 40% probability.

Human Impact:
Score based on greatest possible impact should worst-case event occur at your facility. Consider the likely number of fatalities, injuries, homeless, etc. Score 1 low - 5 highest.

Property Impact:
Score based on the economic costs of the event, including both direct and indirect property damage from the hazard. Smoke damage would be a 1 while a total loss should be a 5. Score 1 low - 5 highest.

Business Impact:
Score based on factors such as service impact, lost wages, revenues, and taxes. Consider cost of relocation, permanent damage to valuable resources, etc. Score 1 low - 5 highest.
Mitigation Activities:
Based on steps taken to mitigate the hazard such as security barriers, fire sprinklers, and redundant technical systems. The more mitigation measures taken, the higher the score. Score 1 low - 5 highest.

Internal Resources:
Base your score on the internal response and recovery resources. High scores should be given when there are a formal on-site response teams, organized fire brigades, floor wardens, continuity teams, or recovery teams. Score 1 low - 5 highest.

External Resources:
Base your score on the external resources that would be immediately available. This would include the local fire department. Give higher scores if there are specialized teams available or if contractor support such as hot sites, alternate facilities, and response teams are immediately available. Score 1 low - 5 highest.

Understanding the Scores:
Based on the weighted scoring formula hazards that are relatively high will score 3.5 or higher. The spreadsheet is programmed to change colors based on the score as follows:

<table>
<thead>
<tr>
<th>Color</th>
<th>Risk Level</th>
<th>Score Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Red</td>
<td>High Risk</td>
<td>Greater than 3.5</td>
</tr>
<tr>
<td>Yellow</td>
<td>Medium Risk</td>
<td>From 2.0 to 3.5</td>
</tr>
<tr>
<td>Green</td>
<td>Low Risk</td>
<td>Less than 2.0</td>
</tr>
</tbody>
</table>

These scores are based on subjective judgments but, nonetheless, they provide a means to quickly rate the facility’s risk from various hazards. Based on this risk scoring, priorities for increased mitigation and preparedness activities can be determined.
## Risk Index Worksheet for Comparing and Prioritizing Risks

<table>
<thead>

Hazard Profile Worksheet

**HAZARD:**

Potential Magnitude *(Percentage of the jurisdiction that can be affected):*

- Catastrophic: More than 50%
- Critical: 25 to 50%
- Limited: 10 to 25%
- Negligible: Less than 10%

**Frequency of Occurrence:**

- Highly Likely: Near 100% probability in next year
- Likely: 10-100% probability in next year, or at least one chance in 10 years
- Possible: 1-10% probability in next year, or at least one chance in next 100 years
- Unlikely: Less than 1% probability in next 100 years

**Seasonal Pattern (if applicable):**

**Areas Likely To Be Affected Most (by Sector):**

**Probable Duration:**

**Potential Speed of Onset (Probable amount of warning time):**

- Minimal (or no) warning
- 6 to 12 hours warning
- 12 to 24 hours warning
- More than 24 hours warning

**Existing Warning Systems:**

**Complete Vulnerability Analysis:**

- Yes
- No

### Hazard Profile Worksheet– Completed Example

**HAZARD:** Earthquake  
**Potential Magnitude (Percentage of the jurisdiction that can be affected):**
- □ **Catastrophic:** More than 50%  
- ✓ **Critical:** 25 to 50%  
- □ **Limited:** 10 to 25%  
- □ **Negligible:** Less than 10%

**Frequency of Occurrence:**
- □ **Highly Likely:** Near 100% probability in next year  
- □ **Likely:** 10-100% probability in next year, or at least one chance in 10 years  
- □ **Possible:** 1-10% probability in next year, or at least one chance in next 100 years  
- ✓ **Unlikely:** Less than 1% probability in next 100 years

**Seasonal Pattern (if applicable):**
N/A

**Areas Likely To Be Affected Most (by Sector):**
County-wide

**Probable Duration:**
The earthquake itself is not likely to last long.

**Potential Speed of Onset (Probable amount of warning time):**
- ✓ Minimal (or no) warning  
- □ 6 to 12 hours warning  
- □ 12 to 24 hours warning  
- □ More than 24 hours warning

**Existing Warning Systems:**
None

**Complete Vulnerability Analysis:**
- ✓ Yes  
- □ No

Sample Damage Assessment Documents and Forms

This section contains the following sample documents and forms:

- FEMA’s Preliminary Damage Assessment (PDA) 4-point methodology
- Damage Assessment Level Guide
- Sample Standard Operating Guide for First-in Teams
- First-in Team Damage Rate Sheet
- First-in Team Intelligence Sheet
- Damage Assessment Forms
  - Residential
  - Business
  - Public Facilities
  - Agriculture
- Uniform Disaster Situation Report
- Support Documentation for Business Injury Form
- Infrastructure Damage Assessment Form

These documents and forms are in addition to the ones referenced in the Resource Links section of this lesson. They can be adapted to fit the needs of your community for inclusion in your community’s damage assessment plan.
**FEMA’s Preliminary Damage Assessment (PDA) 4-Point Methodology**

<table>
<thead>
<tr>
<th>Rating</th>
<th>Description</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>N/A / No Damage</td>
<td>No damage has occurred to the structure.</td>
</tr>
<tr>
<td>1</td>
<td>Affected</td>
<td>This category includes dwellings with minimal damage to structure and/or contents and the home is habitable without repairs. This category also applies to homes that are initially inaccessible. Once accessible, a more accurate evaluation of the level of damage can be completed.</td>
</tr>
</tbody>
</table>
| 2      | Minor Damage     | Minor damage encompasses a wide range of damage and is generally the most common type of damage. Minor damage exists when the home is damaged and uninhabitable, but may be made habitable in a short period of time with home repairs. Some of the items that determine minor damage are listed below:  
• Damages less than the maximum Housing Assistance Repair Grant.  
• Windows or doors blown in.  
• One foot or more of water/sewer backup in basement (i.e., furnace, water heater damage).  
• Has less than 50% damage to structure. |
| 3      | Major Damage     | Major damage exists when the home has sustained structural or significant damages, is uninhabitable and requires extensive repairs. Any one of the following may constitute major damage:  
• Substantial failure of structural elements of the residence (e.g., walls, roof, floors, foundation, etc.).  
• Damage to the structure that exceeds the Home Repair Grant maximum.  
• Has more than 50% damage to structure.  
• One foot or more of water on the first floor (of a home with basement). |
| 4      | Destroyed        | Destroyed means the structure is a total loss or damaged to such an extent that repairs are not economically feasible. Any one of the following may constitute a status of destroyed:  
• Structure is not economically feasible to repair.  
• Structure is permanently uninhabitable.  
• Complete failure of major structural components (e.g., collapse of basement walls/foundation, walls, or roof).  
• Only foundation remains.  
• Two or more walls destroyed and roof substantially damaged.  
• House pushed off foundation  
• An unaffected structure that will require removal or demolition (e.g., homes in imminent danger due to impending landslides, mudslides, or sinkholes; beachfront homes that must be removed due to local ordinance violations as a result of beach erosion). |

Bright House
Verizon
I. PURPOSE
The purpose of this SOG is to describe the organization, concept of operations, and logistical matters of Manatee County's interdisciplinary initial impact assessment teams, otherwise known as First-in Teams. These teams will be the first to enter into an area that has been subjected to the impact of the hurricane or other major event, conduct preliminary impact assessments, clear routes to critical facilities, and engage in operational roadway clearance for critical resource access.

II. SITUATION AND ASSUMPTIONS
A. Situation
1. An initial impact assessment is critical to the organization of response and recovery measures in the immediate aftermath of a major storm or destructive event. This initial assessment is essential for obtaining State and/or Federal emergency declarations in order to mobilize external assistance from these and other sources.
2. Since immediate post-impact over flight may not be feasible due to lingering severe weather and/or lack of daylight, initial damage estimation will have to be conducted from the ground. Also, certain damages cannot be accurately determined from the air.
3. Early rescue efforts can be delayed by downed power lines and debris in roadways. The First-in Teams will have the advantage of appropriate utility personnel in accompaniment for immediate authorization for clearance.
4. Random response and recovery efforts can waste response capabilities, cause duplication of services, fragmentation command, and can potentially cause further damage to critical facilities and citizen interests.
5. A variety of public and private entities have valid reasons for reentry into impacted areas.
6. Priority routes have been identified in advance of any storm or serious event that will be cleared by First-in Teams. See Route Maps.
7. There are few facilities where First-in Team personnel can find refuge and secure essential equipment during a major storm.
8. Communication capabilities are likely to be seriously impaired for an undefined period of time after a storm or other destructive event. This could interfere will dispatch of Damage Assessment Teams and rescue units.

B. Assumptions
1. Facilities selected as refuges for First-in Teams must prove adequate for their purpose.
2. Agencies with responsibilities in this SOG should perform as expected.
III. ORGANIZATION

A. Areas of Team Responsibility
Each First-in Team will be assigned operational responsibilities in a specified geographical region of the County and secondary responsibilities in other areas as directed by the EOC.

B. Incident Command
1. Manatee County First-in Teams will follow the Incident Command System (ICS) structure in daily and emergency duties. This command structure incorporates coordinated efforts in planning, operations, logistics, and administration as outlined by ICS procedures.
2. During emergency activations, the ESF 4/9 First-in Team Coordinator will coordinate directly with the EOC Operations Chief for instructions and then will coordinate field operations with Team Leaders. Each team should have an Assistant Team Leader whose primary responsibility will be to serve as Safety Officer for the team. During field operations, Team leaders have overall control of the mission and response of the team. Once emergency duties of the teams are complete, staff and equipment may be released to their agencies for additional duties.

C. Team Makeup
First-in Team members will be assigned by their respective disciplines to achieve the teams' mission. Each member is to be equipped with appropriate personal protection equipment (PPE) and mission equipment. Each member of the team represents unique technical and professional expertise. Every member of the team is expected to defer to the member whose expertise is foremost in any given situation.

D. Training
1. First-in Team Leaders are required to meet quarterly to cover planning and training issues. Training dates will be predetermined by the EOC Operations Chief in coordination with Team Leaders. Every effort must be made for the team leaders to attend these meetings. Absences will be dealt with on an as needed basis to include removal and replacement on the team.
2. First-in Teams will participate in an annual drill. During annual training, it is crucial for every member of the First-in Team to participate. Members missing training become a weak link on the team because they are not updated on critical mission training.
3. It is the responsibility of the individual Team Member to inform the Team Leader he/she will be missing training. Team Leaders who are unable to a meeting must inform the ESF4/9 First-in Team Coordinator.
4. A core of training classes is recommended to ensure every member of the First-in Teams has the basic knowledge and skill necessary to perform the missions of the team. Those members that have not completed this core of classes will be limited to certain activities during an activation of the First-in Teams.
IV. CONCEPT OF OPERATIONS

A. Pre-storm:
   1. The First-in Team will be placed on standby and prepared to deploy following the activation of EOC to a level 1 (Agency Representatives to advise internal staff). Upon a decision to activate the team, the EOC Operations Chief will have the ESF 4/9 FIT Coordinator contacted and informed to prepare the teams for activation. First-in Team members will then be alerted as early as possible by their Team Leader in order for them to make the necessary arrangements for their families. Individual members of the First-in Team may be required to provide their agency with a copy of their designated family emergency plan.
   2. Team Leaders brief will take place in the EOC conference room located at the Public Safety Center, 2101 47th Terrace East, Bradenton, Florida 34203
   3. The briefing will include review of maps, mission priorities, team coordination, communication specifics and other issues as needed. This briefing shall also include methods and plans of execution for missions.
   4. The ESF 4/9 FIT Coordinator will notify the operators of First-in Team refuge facilities to alert them to prepare the facility for use.
   5. First-in Team members will "pull-back" to their assigned staging area in accordance with their agency protocols. The members shall secure equipment and establish communications within the team and with ESF 4/9 First-in Team Coordinator upon arrival at the predetermined staging area. Each member is required to bring all individual items as outlined in Section V, Item B to the designated area.

B. Trans-storm
   The First-in Team will remain in place and maintain contact with ESF 4/9 by radio until the storm has lifted enough for them to move out. Teams must not mistake the eye of the storm for the passage of the storm itself. Once sustained winds have reached less than 39 MPH, First-in Team members will be instructed by the Team Leaders to begin their missions.

C. Post-storm
   1. The primary function of the First-in Team is to re-enter an area impacted by a hurricane or other serious event as soon as conditions permit, ahead of all others to complete the following:
      - Render only immediate life saving techniques and call for EMS response;
      - Emergency debris clearance on routes to critical facilities;
      - Impact assessment to ESF4 during route clearance;
      - Identify damage severity to ESF4;
      - Identify additional resources needed and prioritize; and
      - Limit additional infrastructure damage
   It is expected First-in Team operations will last no more than 72 hours. Then, they can be withdrawn for possible reassignment to assist with Urban Search and Rescue Operations, extended debris clearance, or return to their parent agency, as directed by the EOC Operations Chief.
2. The areas to be checked automatically by First-in Teams are depicted in maps showing various routes. These routes may be used as suggested guidelines or may be adopted for any given emergency situation at the recommendation of the Team Leader. Priorities and missions may be altered by the County Administrator, Incident Commander, or EOC Operations Chief as necessary.

3. Upon storm passage, as determined by either direct observation, or as advised by the EOC Operations Chief or other authority, the team will:
   a. Start/maintain efforts to establish radio contact with ESF4/9 FIT Coordinator until successful in accordance with the established Radio Communication Plan – ICS 205 (Attachment 1). The ESF 4/9 Coordinator will be responsible for the formulation of the ICS-205.
   b. Check personnel for injuries and vehicles/equipment for damage.
   c. Finalize a plan to fit the situation, load equipment, and prepare to start on identified routes. The Team Leader should insure an Incident Action Plan – ICS 202 and Individual Medical Forms have been completed in preparation of the team mission being initiated. The Team Leader (or designated scribe) should maintain a Team Unit Log – ICS 214 during operations. Upon initiation of the plan, teams should bypass major obstacles as necessary to avoid major delays and make notes of damaged areas using the following methods:
      • Photographs.
      • Estimated percentage values of damage to groups of structures and infrastructure using street blocks and possible GPS coordinates as identifiers. Be specific about areas affected.
      • Mark maps to depict areas where further response and recovery efforts will be needed.
   d. Where possible, paint Street names on pavement with spray paint at intersections where street signs have been blown down.
   e. Due to safety concerns, First-in Team members will:
      • Always work in pairs.
      • Work only during hours of daylight.
      • Report hazardous materials/conditions to ESF 4/9 FIT Coordinator upon discovery. ESF 4/9 will coordinate response with ESF 10 Hazmat Coordinator.

D. End-of-Mission

When the mission is completed, teams will assemble and account for all personnel and equipment, and return to the initial assembly area or other designated point, as directed by the EOC Operations Chief ESF 4/9 FIT Coordinator or Team Leaders and prepare to brief and /or escort EOC personnel. Prior to dismissal, all members must undergo debriefing. Individual Team Leaders will be responsible to insure this is completed

a. Team notes mapping, photographs, and debriefing information should be delivered to the EOC as soon as possible by the Team Leader.
b. Team equipment and/or team members may be needed for missions elsewhere. Team members are not to be released to other tasks until they are debriefed. The Team Leader or other team member may debrief all Team members and collect team reports for presentation in the EOC.

c. Team members will be assisted through the EOC to obtain status regarding their families and homes. This should be accomplished as early in the event as possible to establish mission focus of team members.

E. Media Relations

(Situational) Primary concentration is the mission. Defer all media inquiries to the Public Information Officer (ESF 14) through EOC at (941) 749-3018. In the event the media relations will be an advantage, no one except a First-in Team Leader will speak with the media, unless authorized by an ESF 14 Public Information Officer (PIO). This will avoid the release of conflicting information. If individual team members are approached by a member of the member, refer to the Team Leader.

V. LOGISTICS AND ADMINISTRATION

A. Assembly/Staging Refuge Areas and Suggested Routes: See attachment 3 (Assembly areas and routes may be adjusted as necessary.)

1. Individual Equipment: All members are to be equipped with the following items:

   1 Ea. Hard Hat
   1 Pr. Laced leather boots w/non-slip-sole (Steel toe/shank)
   3 Ea. Long sleeved shirts
   3 Ea. Heavy duty trousers
   1 Ea. Eye/Hearing protection
   1 Pr. Heavy duty leather gloves
   1 Ea. Dust/smoke mask
   1 Ea. Eyeglasses/Sunglasses
   1 Ea. Reflective vest
   1 Ea. Flashlight w/extra batteries
   1 Btl. Insect repellent/Sun screen
   1 Qt. Canteen
   1 Ea. Mess, pan, knife, fork & spoon
   1 Pr. Wet weather gear
   1 Ea. Mat or sleeping bag
   1 Wk. Personal Medications
   1 Wk. Personal hygiene supplies
   3 Ea. Towels & wash clothes
   1 Ea. Water proof duffel bag or equal
   3 Days Individual or special food for 3days - (MRE's, Heater Meals, etc)

2. Basic team Equipment: Items provided by member’s agencies as follows (This list maybe modified as needed):

   1 St. Functional area expert SOP’s & checklist

32
1 Ea. Portable air compressor
1 Ea. Portable generator with extension cords
2 Ea. 12 volt Tri-pod lights
5 Ga. Fuel premixed for 2 cycle motors if needed
1 Ea. 800 MHz radio per vehicle
1 Ea. Still camera with extra batteries
1 Ea. Camcorder with extra batteries and film
1 Ea. Binoculars
1 Ea. Laptop computer with GPS

As Required	Chainsaws (2 ea.)
As Required	Oil, spare parts & tool kits for chain saw users

3. Team Vehicles: EMS Strike team vehicle or Fire Vehicle

a. Fuel Document (per vehicle):
5 gallons of drinking water
Tire patch kit w/ gauge and 4 cans of tire inflator
First aid kit and flashlight
Maxx- & Multi-purpose axes
Laminated area maps
Tow chain or strap
5 gallons of fuel for equipment and/or vehicles
All necessary ICS forms
VHF Mobile Radio and Antenna per Team (supplied by Emergency Management)

b. Vehicle Type and Source (per team):
1 Pay loader (Public Works)
1 Low boy (Public Works)
1 Rescue vehicle/Command Vehicle (EMS/Fire)
1 6 x 6 (Public Works)
1 4 x 4 Utility Vehicle (Public Works)
2 Marked police cars (Local Law Enforcement Agency)
1 Company Bucket Truck (PL/Peace River Electric)
1 Company Bucket Truck (Verizon)
1 Company Bucket Truck (Bright House)
1 School Bus or MCAT Bus (School Board/Transit)
1 Truck Crane (Public Works)

B. Administration

1. Changes to this SOG will be made after consultation with parties involved. All parties involved are encouraged to identify improvements to this SOG.

2. All equipment lists are subject to modifications as recommended by Team Leaders. Unilateral changes by organizations are to be avoided as they may adversely affect the overall team mission.

# DAMAGE ASSESSMENT – Residential

## Respondent Information
Date: 
Name: 
Agency: 
Phone: Fax: 
Location: (City) (County)

## Resident Information
Name: 
Permanent Mailing Address: 
Permanent Phone Number: 
Current Address: 
Current Phone Number: 
Number of Occupants by Age: 
Under 21
21 – 64
65 +

Income Level of Residents (check one): 
Under $12,320
$12,320 – $57,680
Over $57,680

## Property Information
Damaged Property Location: 
Is home inaccessible? Yes No
Is property habitable? Yes No
Is the property (circle): a) Urban Rural b) Single-family Multiple-family Mobile Home c) Owned Rented
If property is rented:  
Name of owner:  
Address:  
Phone:  

**Damage Assessment**

FEMA Designation (check one):
- [ ] Destroyed
- [ ] Major Damage
- [ ] Minor Damage
- [ ] Affected Habitable

Is residence insured:  
Yes No

Does residence have flood insurance?  
Yes No

Dollar damage of residence: $_____________

Dollar estimate of insurance recovery: $_____________

Dollar damage to personal property: $_____________

Dollar estimate of personal property insurance recovery: $_____________

**Insurance Information**

Name of insurance company:  
Insurance Agent:  
Phone:  

**Other Information**

Is residence a primary or secondary home?  
Primary Secondary

Will residence be repaired or rebuilt?  
Yes No

Will residence be repaired/rebuilt in same community?  
Yes No

DAMAGE ASSESSMENT – Public Facilities

Collect information for each facility on a separate form.

The categories for damage to public facilities are listed below. When asked for the damage category, simply list the appropriate letters.

A. Debris Clearance
B. Protective Measures
C. Roads Systems
D. Water Control Facilities
E. Public Building and Equipment
F. Public Utility Systems
(Do not include privately-owned utilities)
G. Parks/Recreation/Other

From FEMA’s EMI course IS-1 *Emergency Manager: An Orientation to the Position*
For Public Facilities

(A) Debris Clearance
Debris clearance is the removal of damaged objects such as tree limbs, building parts, signs, and other materials from public roads and streets, public property, and private property.

(B) Protective Measures
These are measures to prevent further damage when the event is occurring. For example, sandbagging a riverbank, evacuating, controlling traffic, and erecting barricades are such measures. You take them to protect life and safety, property and health.

(C) Road Systems
This category includes roads, streets, bridges, culverts, and other similar transportation-related features. You might subdivide the damage assessment into state highways, county roads, and city or village roads if this is useful. Damage might range from some minor damage fixable immediately with local resources to more extensive damage from complete washout or road destruction requiring more substantial resources and time.

(D) Water Control Facilities
This category covers damages to dikes, levees, dams, drainage channels, irrigation works, and other similar facilities. Obviously, it is mostly flood-related emergencies that will involve these and require an assessment of damage.

(E) Public Buildings and Equipment
Damage assessment in this area should include the number of buildings affected, the estimate for their restoration, cost of supplies or inventory lost or damaged, and vehicles or equipment that were damaged or destroyed. This kind of damage assessment occurs rather frequently, since most major disasters affect buildings one way or another.

(F) Public Utility Systems
Facilities in your political jurisdiction that sustain damage could include the water system, sanitary sewer systems, storm drains, and other publicly owned utilities. Since they are critical to modern-day living, it is important to get an accurate and early assessment of the damage they may have sustained. Often, they are high on the priority list of services to restore.

(G) Parks, Recreational, and Other
Structures that fall in this category may be eligible for special disaster assistance. Therefore, make sure your damage assessment includes any damage to these facilities. You are better off to file for assistance than to decide that the damage sustained is not worth the filing.

These facilities include educational, emergency, medical, and custodial facilities but exclude churches or places used exclusively for worship.

This last group includes parks and recreational facilities such as bike and jogging paths, sports fields, and community centers.

Summary
In brief, these are some of the major duties your emergency management team will be responsible for during response. As you can see, there will be a lot to do. The more of this you can anticipate and plan for, the better off you and your jurisdiction will be when something happens.

The secret is playing your stage manager role well and making sure that all of the other actors and performers know their roles and are ready to respond.

## PART III - DISASTER IMPACTS

(USE SEPARATE SHEETS IF NECESSARY)

**A. GENERAL IMPACT:**
1. Identify and describe damages which constitute a health and/or safety hazard to the general public.
2. Population adversely affected directly or indirectly by the loss of public facilities or damages.
3. What economic activities are adversely affected by the loss of public facilities or damages?

**B. RESPONSE CAPABILITY:**
Can the applicant respond and recover from the damages quickly and without degradation of public services? Describe.

**C. IMPACT ON PUBLIC SERVICES IF DECLARATION IS NOT MADE:**
E.g., Deferral of permanent repairs, impact on ongoing services and capital improvements, etc. Describe.
